

Remote maintenance on Newster machines never was so easy

Thanks to the new technologies now it is very easy to make remote maintenance on the Newster machines. Newster provides a wi-fi router that can be connected to any smartphone hotspot.

To be operative the device must be paired with a smartphone, this operation must be carried out using a computer connected to internet and following a video and it takes 30 minutes.

Newster technicians are always available to execute this procedure by a remote pc connection.

After this operation the wi-fi router must be installed inside the electrical board of the Newster machine, this installation takes no more than 10 minutes and Newster provides all the necessary wires and Ethernet cables.

After that it is enough to activate the hot-spot connection of the smartphone and now our technicians can make remote maintenance on the machine. Once the maintenance is finished it is possible to dismount the router and keep it for the next maintenance.

With only one device your technical staff can make remote maintenance on all your machines.
