Endoscopes

Laparoscopes
High Definition, wide angle
Autoclavable, max. 134° C / 2,3 bar / 5 min

Medici Endoscope-line consists of high quality telescopes which have been developed according to the most modern technology and production standards. A new generation optic system assures a unique color, contrast and highly defined details reproduction, both in the middle of the image and at the edges. A particularly true color reproduction and a markable depth of focus guarantee a natural picture. Distal and proximal sapphire windows provide an extremely high level of scratches resistance.

Ordering n°	Diameter	Viewing Angle	Working length

Fiber Light Cables

Fiber Light Cables, Xenon Safe, Led White Light

Medici Optical Fiber Cable is made to resist and to shield against very high thermic energies especially in the use of **Xenon** light sources due to the fusion of light fibers in the cable itself.

This guarantees **20%** light more in the operating field.

New High Performances White Line-LED Light Cables

New «WhiteLine» LED series Optical Fibers Light Cables have been designed and made up to be used with cutting edge LED Light Sources. By enhancing the trasmission effectiveness of an already well-established and first-choice optical fibers light cable, light output and illumination, when operating with a LED light source together with a modern HD telescope, can be visibly and considerably increased.

3,5mm diameter, xenon safe, for Ø 4,0 - 2,9mm scopes

Instruments for Gynecology

Uterine Manipulator

The Uterine Manipulator was developed for the manipulation and presentation of the uterus during a complete laparoscopic hysterectomy, as well as protecting the bladder, ureter, and rectum during the electrosurgical resection of the uterus. The reusable instrument is fully modular and can fit all anatomical conditions as vaginal delineating tubes and intrauterine elements of various sizes are available. Once the instrument is in place the uterus can be moved in all directions, thus providing optimal exposure of all anterior, posterior and lateral aspects of the uterus.

The vaginal delineating tube, is slipped over the instrument shaft in a forward direction and thus allows the separation of the vagina whilst offering protection to the bladder, ureter and rectum. The electrosurgical resection can be easily and safely accomplished around the ceramic ring. The ceramic ring does not deteriorate when electrosurgical energy is applied and thus can be reused many times.

The vaginal delineating tube, is available in 3 different sizes to fit the specific anatomical conditions. The assembled instrument is comparatively light in weight and well balanced -this reduces effort during use.

With the tenaculum forceps tightly fixed to the cervix, the uterus can now easily be moved for presentation and preparation purposes.

The complete instrument set consists of several components which can be easily dismantled, cleaned, sterilized and reassembled. The high-grade materials are very durable and sterilization is trouble-free.
