

# Device Stand

Product Code: FS1

## Standard Features

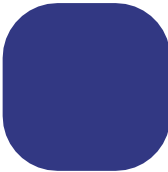

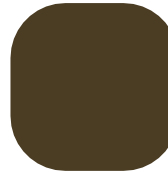

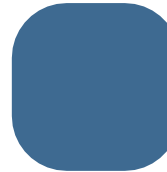

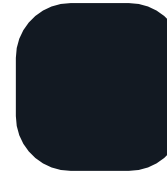

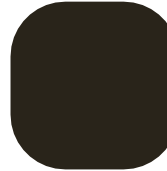

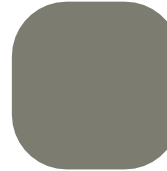

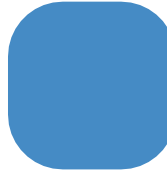

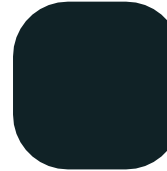

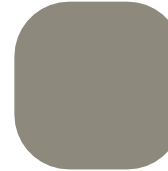

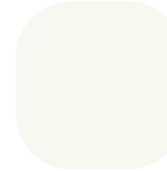

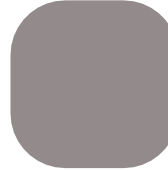

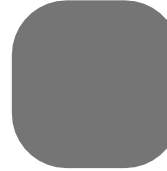

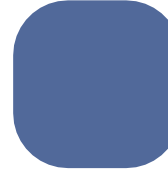

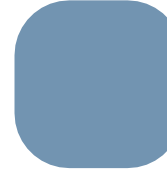

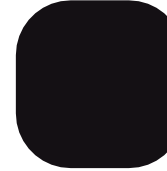

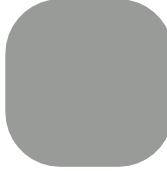

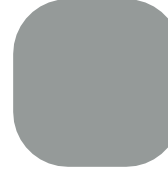

- The stands are specially designed for healthcare professionals to easily access and safely use medical devices. Our device stands are mobile, hygienic, durable and easy to clean. These stands can be used in examination rooms, surgical rooms or treatment areas.
- Apart from our standard device stands, they can be manufactured in different sizes and structures to accommodate various medical devices. They can be larger and more versatile for the orderly placement of surgical instruments. There is also a stainless serum hanger for hanging serum. There is 1 drawer for storing materials and 2 shelves for placing devices. There are 2 electrical plugs behind each shelf.
- The portability of the device stands allows clinical staff to easily move the equipment they need to different rooms. In addition, the fact that they are made considering sterilization requirements ensures that they meet the hygiene standards in clinics.

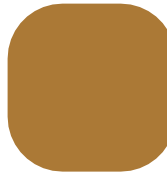

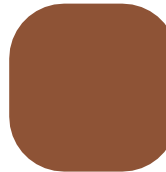

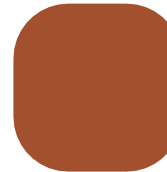

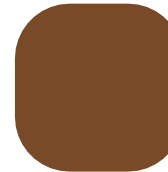

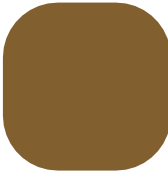

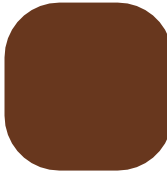

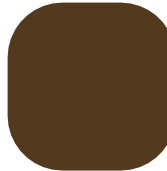

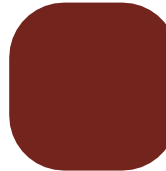

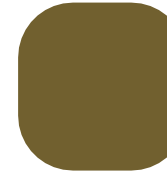

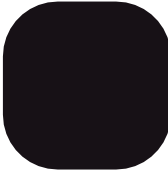

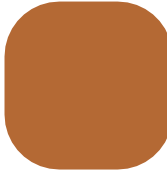

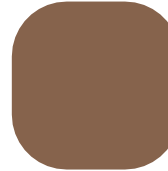

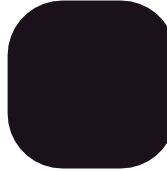

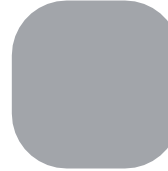

Our coffee tables have a wide range of colours available in our colour chart.
