## McGRATH™ MAC Video Laryngoscope

### One system — always available

The McGRATH™ MAC device is a cost-effective video laryngoscope — so it's within reach for every intubation.

With disposable, sterile blades and flexible cleaning options, it's ready when you are.

### Technical specifications

#### McGRATH™ MAC handle

Size	180 mm x 68 mm x 110 mm
Weight	200 g
Power	3.6V lithium battery pack (c. 250 minutes)
Light source	High-intensity LED
Display	2.5" LCD color display
Camera	CMOS
Materials	Durable medical-grade thermoplastics with reinforced structural alloy core. The device and packaging are latex free.
Warranty	36 months

#### McGRATH™ MAC disposable blades

Material	Fog-free medical-grade optical polymer
Packaging	Packaged sterile for single use

### Ordering information

# ENDOTRACHEAL TUBE SOLUTIONS

# THE TRACHEAL IMPACT OF INTUBATION.<sup>1</sup>

Shiley™ Oral/Nasal Endotracheal Tube  
with TaperGuard™ Cuff

## Features and benefits

- Taper-shaped cuff
- Depth marks above the cuff
- Hooded Murphy tip with eye
- Suitable for oral and nasal intubation
- Tip-to-tip x-ray line
- Also available with preloaded intubation stylet
- DEHP free

## Ordering information

# Shiley™ Evac Oral Endotracheal Tube with TaperGuard™ Cuff

## Features and benefits:

- The Shiley™ Evac oral endotracheal tube with TaperGuard™ cuff incorporates evac technology. Subglottic secretion drainage can potentially reduce the incidence of ventilator associated pneumonia.<sup>1</sup>
- Incorporated hooded Murphy eye
- Tip-to-tip x-ray line

# Shiley™ Lo-Contour Oral/Nasal Endotracheal Tube, Cuffed, Reinforced

BRANDT™ System

Murphy Eye

## Features and benefits

- Metal-reinforced spiral, uniformly and securely encapsulated in the wall of the tube, to help prevent kinking compared to traditional endotracheal tubes
- High-volume, low-pressure cuff
- Two depth marks above the cuff
- Reinforcement to support x-ray control and verification of tube position
- 15 mm connector bonded to the tracheal tube
- Suitable for oral and nasal intubation
- Available with or without Murphy eye
- Available with unbonded connector
- Available with preloaded intubation stylet
- An optional bite block or guedel airway is recommended when using reinforced tracheal tubes. Reinforced tracheal tube is also available with the BRANDT™ system

# Shiley™ Laserflex Oral Endotracheal Tube, Dual-Cuffed

## Features and benefits

- Laser-resistant, non-flammable, flexible stainless steel tube for ventilation during CO<sub>2</sub> and KTP laser surgery of the laryngeal/tracheal area
- Airtight steel spiral design
- 15 mm connector bonded to the tracheal tube
- Dual cuffs of extra large diameter and individual inflation lines
- Pilot balloons with self-sealing valves marked “proximal” and “distal”
- Murphy eye
- Both cuffs may be filled with isotonic saline to help facilitate protection during laser surgery

Shiley™ Endobronchial Tube, Left, with Polyurethane Cuff

Features and benefits

- For left-sided endobronchial intubation when differential or one-lung ventilation is indicated during thoracic surgery or intensive care
- Polyurethane tracheal cuff material for a much higher puncture strengths than conventional materials<sup>1</sup>
- Specially designed bronchial cuff may assist in locating the distal tip when verification is confirmed by the fiber-optic bronchoscope
- Blue bronchial cuff may assist in identifying the distal tip when verifying correct placement by a fiber-optic bronchoscope
- Slightly curved bronchial tube tip to help improve placement in left main bronchus
- X-ray opaque markers at distal tip, above bronchial cuff, and at tracheal opening to aid location and verification of tube position
- Accessory pack contains 2 Opti-Port™ connectors, 2 Gentle-Flo™ endobronchial suction catheters, and 1 “Y” connector
- Also available with x-ray opaque carinal hook for precise location of the endobronchial tube within the carina

Shiley™ Endobronchial Tube, Right, with Polyurethane Cuff

For right-sided endobronchial intubation when differential or one-lung ventilation is indicated during thoracic surgery or intensive care.

Features and benefits

- The polyurethane tracheal cuff material may demonstrate a higher puncture strength than conventional PVC materials<sup>1</sup>
- Blue color-coded bronchial cuff, bronchial proximal lumen, and bronchial pilot balloon for easy identification
- X-ray opaque markers at the distal tip, around the side eye, above the bronchial cuff, and at the tracheal opening aid location and verification of the tube position
- The accessory pack contains 2 Opti-Port™ connectors, 2 Gentle-Flo™ endobronchial suction catheters, and 1 “Y” connector

# Shiley™ Esophageal Endotracheal Airway Double Lumen

When you must establish a difficult airway, time and accuracy are critical. Unlike traditional endotracheal tubes, it is designed to establish a nonsurgical patent airway when placed in either the trachea or the esophagus.

### Features and benefits

- Special double-lumen may establish an effective airway through either esophagus or trachea
- Pharyngeal balloon inflates designed to hold device firmly in place and help prevent the escape of gas through nose or mouth
- Full-length lumen may enable suctioning of gastric contents with no interruption of patient ventilation if esophageal tracheal airway is placed in esophagus
- Esophageal cuff inflates to seal the esophagus to help prevent gas from entering the stomach and gastric contents from being aspirated
- Appropriate for pre-hospital, surgical, and emergency use
- Tip-to-tip x-ray line
- Esophageal/tracheal double-lumen airway:
  - Use size 37 for patients 4' (122 cm) to 5' 6" (183 cm) tall
  - Use size 41 for patients 5' (152 cm) tall and above

V3 Evac System with subglottic suction function

### Features and benefits

- Compatible with all endotracheal tubes and cannulas with the
- subglottic suction function
- Protection against infection through the use of disposable material
- Especially light and handy due to the use of polycarbonate and aluminium
- Standard pole mount bracket
- Regulation range from 0 – 200 mmHg
- For use on vacuum source
- Continuous and intermittent suctioning

# Shiley Cuff Pressure Management

Cuff pressure management systems for tracheal and tracheostomy tubes with high volume - low pressure cuffs

## Automatic Cuff Controller

### Features and benefits

- Incremental pressure adjustment (max. value 99 cm H<sub>2</sub>O)
- Auto-set function for an automatic pressure setting
- Acoustic and visual alarm in case of pressure changes or disconnection
- Battery
- Universal clamp for fixation to standard horizontal rail and pole mount

# Shiley™ Intubating Stylet

### Features and benefits

- Malleable aluminum with smooth plastic sheath to assist in tracheal intubation under difficult circumstances
- Soft distal tip to reduce the possibility of intubation damage
- Special surface for easier introduction and removal of stylet
- Packed clean, for single use only
- Also available sterile
- DEHP free

# Shiley™ Nasopharyngeal Airway

### Features and benefits

Provides an open airway during suctioning and bronchoscopy. Soft material helps to minimize patient coughing and gagging. Protects mucosa for repeated catheter passage.

# Nellcor™ Colorimetric Adult and Pediatric CO<sub>2</sub> Detector

Nellcor™ Colorimetric CO<sub>2</sub> detectors may help verify that your patient is intubated properly right from the start — and that they stay that way during transport.<sup>1</sup>

Our CO<sub>2</sub> detectors give you an easy, economical way to assess exhaled CO<sub>2</sub> during airway management.<sup>1</sup>

### Features and benefits

- Attaches directly to endotracheal tube to indicate exhaled CO<sub>2</sub> levels during intubation for up to 2 hours
- Responds quickly to exhaled CO<sub>2</sub> with a simple color change from purple to yellow
- Features an easy-to-see display window that provides constant visual feedback with breath-to-breath response
- Aids assessment of CPR effectiveness

# TRACHEOSTOMY SOLUTIONS

# Shiley™ Neonatal/Pediatric Tracheostomy Tubes

The new Shiley™ neonatal and pediatric tracheostomy tubes with new design enhancements and DEHP free materials.

### Design enhancement

#### Flange

Softer\*, clear material on neck flange for enhanced visualization of the underlying skin and stoma site. Softer material may increase patient comfort

#### Cuff

Low-profile (low-volume), low-pressure air-filled cuff to provide sealing, TaperGuard™ cuff technology

#### Material

Made with materials that do not contain DEHP

#### Flange Eyelet

Raised outer eyelet portions for easier access when inserting the trach tube holder/tape tie through the flange eyelet

#### 15 mm Connector

Increased length on both cuffed and cuffless devices

#### Sizes

Additional smaller sizes as well as a range of cuffed neonatal tubes

\* Compared to legacy Shiley™ product

# Shiley™ Flexible Tracheostomy Solutions

## Features and benefits

- Unique TaperGuard™ taper-shaped cuff, airfilled to help control ventilator leaks and manage intracuff pressures
- Enhanced soft flange designed to reduce contact with the stoma site and increase patient comfort.
- Available in an expanded range of sizes, compliant to ISO standards
- Color coded by size
- Softer material which may lead to a more comfortable patient experience
- Design makes it possible to ventilate with or without the inner cannula
- DEHP free

# Shiley™ Adult Flexible Evac Tracheostomy Tube with TaperGuard™ Cuff

Available in three configurations, Shiley™ flexible evac tracheostomy tubes offer design features that help both clinicians and patients.

## Transparent flange

The transparent flange on the Shiley™ flexible tracheostomy tube allows direct visualization of the stoma and surrounding skin. The slight indent behind the flange and various airflow openings also may help to promote healthier skin behind the flange.

## Unique taper-shaped cuff

The clinician-inspired TaperGuard™ cuff on Shiley™ flexible tracheostomy tubes can:

- Reduce fluid leakage\*
- Exert less lateral wall pressures on the trachea<sup>1</sup>
- Reduce air leaks around the cuff\*

## Integrated cuff inflation line and evac portal

The fully integrated cuff inflation line and evac portal enable a smooth introduction of the cannula into the trachea. Together, the smooth cannula, TaperGuard™ cuff, and beveled tip may reduce the percutaneous insertion force. The cannula also features the familiar Shiley™ tracheostomy tube angle and a radiopaque x-ray line for monitoring position within the trachea.

\* Based on internal testing comparing the Shiley™ Flexible adult tracheostomy tube with TaperGuard™ cuff to the Shiley™ DCT tracheostomy tube cuffed.

1. Internal benchtop testing results. Results reflect the Shiley™ flexible adult tracheostomy tube with TaperGuard™ cuff, disposable inner cannula tubes ability to titrate/control ventilator air leak in comparison to the Shiley™ tracheostomy tube cuffed with disposable inner cannula (DCT). Benchtop test # 10122514.

## Tracheosoft™ XLT

Extra-long flexible tracheostomy tube with disposable inner cannula

Patients with full or thick necks as well as those with long tracheal anatomies, tracheal stenosis or malacia may require extra-long tracheostomy tubes in order to achieve a proper fit. With extra length in the proximal or distal portions the Tracheosoft XLT tube accommodates different anatomical challenges.

Full or thick neck, choose Shiley™ Tracheosoft™ XLT tube with proximal extension (XLTCP or XLTUP).

Long tracheal anatomies, tracheal stenosis or malacia, choose Shiley™ Tracheosoft™ XLT tube with distal extension (XLTCD or XLTUD).

- Choice of distal or proximal extensions to fit unusual anatomies.
- Flexible inner and outer cannula and high-volume, low-pressure cuff.
- Extended-Length, Cuffless Tracheostomy Tube with extra length in proximal portion.
- Extended-Length, Cuffed Tracheostomy Tube with extra length in proximal portion.
- Extended-Length, Cuffless Tracheostomy Tube with extra length in distal portion.
- Extended-Length, Cuffed Tracheostomy Tube with extra length in distal portion.
- Extended-Length, Disposable Inner Cannula with integral 15 mm twist-lock connector.
- Smooth, rounded-tip obturator facilitates insertion.

### How to measure.

This diagram illustrates how the proximal, radial and distal measurements are determined for proper sizing.

Shiley™ DFEN & DCFN

Cuffed tracheostomy tubes with disposable inner cannula

- DFEN Disposable Fenestrated Low Pressure Cuffed Tracheostomy. Tube offers inner cannula disposability, permitting to breathe through upper airway if desired.
- DFEN Disposable Cuffless Fenesrated Tracheostomy Tube allows the convenience of inner cannula disposability, while permitting the patient to breathe through the upper airway if desired.
- a. Disposable Inner Cannula (DIC) has integral 15 mm snap-lock connector for quick and safe disposal after a single use.
  - b. Smooth, rounded-tip obturator facilitates insertion.
  - c. Disposable Decannulation Plug (DDCP) closes the proximal end of the DCFN and DFEN to permit breathing through the fenestration and the upper airway.

Shiley™ FEN

Cuffed tracheostomy tube with reusable inner cannula

- FEN Fenestrated Low Pressure Cuffed Tracheostomy Tube allows for weaning of patient from tube by facilitating upper airway breathing.
- a. Inner Cannula with integral 15 mm twist-lock connector permits connection of ancillary equipment and is translucent for easy inspection.
  - b. Fenestrated Inner Cannula with green 15 mm connector and white 15 mm-cap.
  - c. Smooth, rounded-tip obturator facilitates insertion.
  - d. Decannulation Plug (DCP) is connected to the outer cannula to permit upper airway breathing.

Shiley™ CFN & LGT

Cuffless tracheostomy tubes with reusable inner cannula

- CFN Cuffless Fenestrated Tube is designed for pulmonary hygiene and, when used in conjunction with the Decannulation Plug (DCP), use of a speaking valve, directs breathing through the upper airway.
- LGT Laryngectomy Tube is made with high-quality, compliant material, and is a comfortable, convenient alternative to metal tubes.
- a. Inner Cannula with integral 15 mm twist-lock connector permits connection of ancillary equipment and is translucent for easy inspection.
  - b. Inner Cannula with open lumen and low-profile connector reduces bulk at stoma. (Caution: low profile inner cannula is not adaptable to ventilator equipment.)
  - c. Inner Cannula with closed lumen and low-profile connector is supplied with the CFS and directs breathing through the upper airway.
  - d. Fenestrated Inner Cannula with green 15 mm connector and white 15 mm-cap.
  - e. Smooth, rounded-tip obturator facilitates insertion.
  - f. Decannulation Plug (DCP) closes the proximal end of the CFN to permit breathing through the fenestration and upper airway.

Tracheosoft™ Tracheostomy Tubes

Tracheosoft™ tracheostomy tubes are designed to minimise trauma and maximise patient comfort and ease of use. The large low-pressure, thin-walled cuff presents features that ensure a seal at low cuff pressures avoiding complications due to tracheal mucosal damage.

Tracheosoft™ Standard

Standard tracheostomy tubes

- A Tracheosoft™ standard tracheostomy tube with HI-LO™ cuff.
- B Tracheosoft™ standard tracheostomy tube with HI-LO™ cuff and Lanz™ system for automatic cuff pressure regulation.
- C Tracheosoft™ standard tracheostomy tube with adjustabl flange and HI-LO™ cuff.
- D Tracheosoft™ standard tracheostomy tube with adjustabl flange, HI-LO™ cuff and Lanz™ system for automatic cuff pressure regulation.

Further set components:

a Obturator to facilitate insertion.

Tracheosoft™ tracheostomy tubes are single packed and sterile.

Shiley™ Tracheostomy Tube Accessories

- a Disposable inner cannula (DIC) with integral 15 mm snap-lock connector, individually sterile packaged, required for use with DCT, DFEN, PERC, DCFS, and DCFN.
- b Spare inner cannula (SIC) with red, color-coded twist-lock connector, for temporary use during cleaning or removal of the inner cannula of Shiley™ tracheostomy tubes, may be used with LPC, FEN, CFS, and CFN.
- c Disposable inner cannula, fenestrated (DICFEN) is for use with DCFN and DFEN tracheostomy tubes.
- d White 15 mm cap (CAP) attaches to the fenestrated inner cannula with green 15 mm connector to permit breathing through the fenestration and upper airway.
- e Decannulation plug (DCP) closes the proximal end of the FEN and CFN tubes to permit breathing through the fenestration and upper airway.
- f Disposable decannulation plug (DDCP) closes the proximal end of the DCFS, DCFN, and DFEN to permit breathing through the fenestration and upper airway.

Shiley™ Tracheostomy Tube Accessories *Continued*

- a/b Shiley™ phonate speaking valve (SSV) and Shiley™ phonate speaking valve for use with low-flow oxygen O[2] port (SSVO). Designed for use on alert, awake tracheostomy patients who can breathe without assisted mechanical ventilation. Connects to 15 mm connector on tracheostomy tube. Directs airflow past the vocal cords, helping patients speak without finger occlusion.
- c Shiley™ tracheostomy tube holder (TTH). For pediatric and adult. A convenient alternative to twill tape, the tube holder is made of a soft material with a wide band to promote better skin care and patient comfort. Fits adult through pediatric patients, up to 18 inch neck size. Single-patient use; latex-free.
