DESCRIZIONE/ DESCRIPTION

- Provette per centrifuga prodotte in polipropilene trasparente adatte all'utilizzo in laboratorio e in biologia molecolare.
- Sono disponibili due volumi 15 ml e 50 ml, quest'ultime con e senza base.
- Graduazione chiaramente visibile stampata in colore nero sul corpo provetta e graduazione impressa direttamente nella plastica della parte conica della provetta.
- Area di scrittura bianca per meglio identificare le provette.
- Tappo provvisto di anello interno per una perfetta tenuta.
- Disponibili sia in sacchetto provvisto di zip, che in rack di plastica confezionato in sacchetto con zip.
- **Sterile SAL 10⁻⁶. Libere da DNasi, RNasi e Pirogeni.**
- L'intervallo di temperatura di lavoro raccomandato è 0 - 40 °C. L'idoneità di queste provette per lo stoccaggio al di sotto di 0 °C dipende sia dalla soluzione che dalle condizioni di conservazione. Si raccomanda vivamente di eseguire una prova in condizioni reali per testare l'idoneità delle provette per lo stoccaggio congelato.
- Rimuovere i tappi prima di sterilizzare in autoclave il dispositivo. In assenza di ciò, in autoclave le differenze di pressione che si sviluppano possono causare il collasso del contenitore. Assicurarsi che il metodo di sterilizzazione adottato sia adatto a tutti i componenti del dispositivo (provetta, tappo). In caso contrario, sterilizzarli separatamente ciascuno con il metodo più appropriato. Tenere sempre presente che la sterilizzazione potrebbe ridurre le proprietà meccaniche / funzionali / estetiche del dispositivo.

SCHEDA TECNICA PRODOTTO - TECHNICAL DATA SHEET

- Centrifuge tubes made in transparent polypropylene suitable for use in laboratory and molecular biology.
- Two volumes 15 ml conical and 50 ml, conical or self standing, are available.
- Graduation clearly visible printed in black on the body of tube and imprinted graduation directly into the conical part of the tube.
- White writing area to better identify the tubes.
- Cap with an interior ring for a perfect seal.
- Available in zip bag or in plastic rack packed in zip bag
- **Sterile SAL 10⁻⁶. DNase, RNase, Pyrogens FREE**
- The recommended working temperature range for centrifuge tubes is 0 - 40°C. The suitability of these tubes for storage below 0°C depends on both the solution and the storage conditions. It is strongly recommended that a trial run be performed under actual conditions to test the suitability of the tubes for frozen storage
- Remove the closures before autoclaving the device. In the absence of this, in an autoclave the differences in pressure that occur can cause the collapse of the container. Make sure that the sterilization method adopted is suitable for all components of the Device (tubes, caps). If not, sterilize them separately each with the most appropriate method. Always keep in mind that sterilization could reduce the mechanical / functional / aesthetic properties of the Device.
