

SILICONE WOUND DRAINS

D5

PERFORATED

Jackson-Pratt® type

Soft and kink-resistant.

ROUND and FLAT

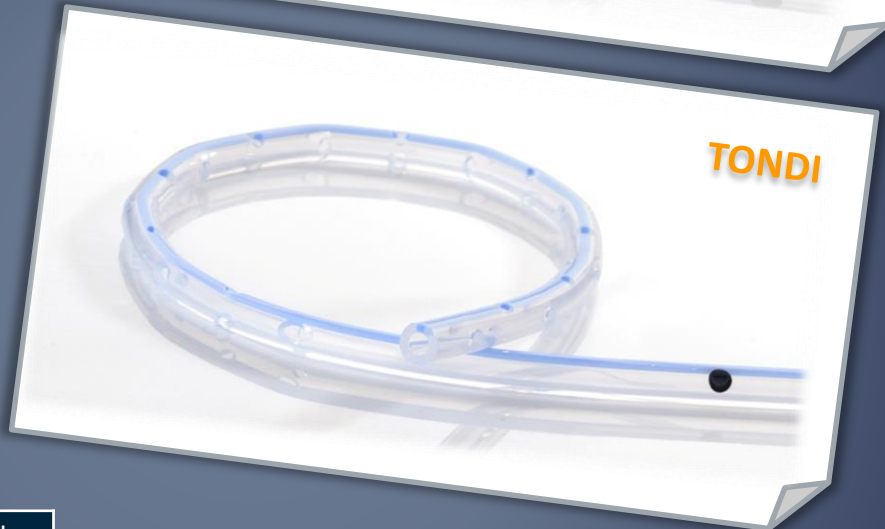

drains 110 cm long are singled injection-moulded for strength and drain integrity.

Drain fenestrations placed between lumens in 20 cm length flat segment help preserve drain patency and enhance wound drainage.

X-ray line.

Adaptor for closed wound system connection.

Single use, sterile.

SILICONE WOUND DRAINS

Drentech™ Bag

The Robinson gravity drainage system is a safe and an effective wound drain. It consists of a 100 cm silicone tube pre-fitted to a bag.

Fluid collection bag with 600 ml of capacity has an internal anti-reflux valve which prevents backflow of fluid to the patient and tap.

Available in 6 eyes pattern.

Closed wound drains are also available in a very simple configuration: 50 cm silicone drain with separate 2.000 ml bag capacity.

Single use, sterile.

- Medical grade silicone, biocompatible.
- Soft and kink-resistant
- Clear, premium quality silicone provides enhanced drainage visibility.
- Corrugated inner wall drain tubes with X-ray line.
- Ideal for capillary drainage in gravity.
- Drain is available also with open wall for large drainage abdominal surgery.

Single use, sterile.

COLLECTION BAG

Monouso, sterile.

REDAX bags can be connected with any gravity or active suction systems for collecting fluids from the patient.

Stepped graduate reading scale ranging 25 to 100 ml.

Bag provided with silk-screen printing for patient information.

Anti-reflux valve in order to reduce the contamination and infection risk and the shed Of fluid in case of capsizing.

WOUND SYSTEMS

SILICONE

Medical grade elastomer, biocompatible, thrombo-resistant silicone bulb.
Clear, high quality silicone provides enhanced drainage visibility.

Silicone bulbs are a drainage system indicated in plastic surgery, neurosurgery, orthopaedics, gynaecology surgery and laparoscopic surgery.

Bulb silicone provides easy activation of suction.
No internal mechanism to interfere with exudate.
Negative pressure ranging 25-75 mmHg.

Internal anti-reflux valve prevents backflow of fluid to the patient.

Bulb reservoirs are available in different capacity: 100, 200, 400 ml.
The 200 and 400 ml reservoirs have a dual inlet ports allow connection of two drains without Y-connector.

Single-use, sterile.
