

## **ASD LAMINAT A.Ş. ("ASD LAMINAT") TEN (10) YEAR STANDARD LIMITED WARRANTY OF SPHERE BY ASD**

### **1. Limited Warranty.**

For a period of ten (10) years subsequent to the date of issue of the purchase invoice of the Panel(s) to the Buyer to whom ASD Laminat has sold its Panel(s) (the "Buyer"), ASD Laminat warrants to the Buyer that the Panel(s) comply with the color fastness specifications detailed in the Material Properties Datasheet for the Panel(s) proclaimed on the date of issue of the purchase invoice of the Panel(s) to the Buyer at [www.asdlaminat.com](http://www.asdlaminat.com). Only the limited warranty specified on the date of issue of the purchase invoice of the Panel(s) to the Buyer at [www.asdlaminat.com](http://www.asdlaminat.com) shall be applicable and effective.

### **2. Limited Warranty Conditions.**

This limited warranty shall be null and void and/or shall be deemed revoked upon failure to entirely comply with any of these following conditions:

1. The Buyer has paid the price of the Panel(s) in full to ASD Laminat.
2. At the time of installing the Panel(s), the applicable building codes and standards, laws and regulations shall have been adhered to.
3. Subsequent to the delivery of the Panel(s) to the Buyer, the Panel(s) shall not have been modified or altered except as needed for appropriate installation conforming to all applicable building codes and standards.
4. For purposes of making a claim under this limited warranty regarding a color fastness flaw of the Panel(s), the Buyer shall have informed ASD Laminat of any alleged color fastness flaw by writing, and ASD Laminat shall have been given reasonable opportunity to examine the allegedly flawed Panel(s).
5. The Buyer shall have given ASD Laminat any and all information and documentation in the Buyer's possession or control concerning the Panel(s), along with information regarding installation and maintenance.
6. In order to make a claim under this limited warranty, the Buyer shall have submitted the claim in writing to ASD Laminat together with this limited warranty and with proof that the Panel(s) were purchased by the Buyer directly or indirectly from ASD Laminat.

### **3. Remedy.**

ASD Laminat shall furnish replacement Panel(s) if the Panel(s) that ASD Laminat sold to the Buyer fail to adhere to this limited warranty. Replacement of the Panel(s) shall not extend the warranty duration, and the period of ten (10) years of this limited warranty shall continue to be applicable and effective from the date of issue of the purchase invoice of the Panel(s) to the Buyer. If ASD Laminat furnishes replacement Panel(s), the replacement Panel(s) shall match the color of the Panel(s) initially purchased from ASD Laminat by the Buyer as closely as possible, and ASD Laminat is not obligated to supply an identical color.

#### **4. Limitations of Damages; Exclusive Remedy.**

The sole and exclusive remedy shall be the replacement of the color fastness flawed Panel(s) henceforth. ASD Laminat shall not be liable for any incidental or consequential damages or breach of any other warranty, express or implied. ASD Laminat is not liable for indirect losses, losses incurred by third parties, or losses to the extent covered by any insurance taken out by the Buyer. Removal and reinstallation of the Panel(s) replaced under this limited warranty shall be at the Buyer's sole cost and expense which shall include the following costs: the costs of dismantling a supporting structure, the costs of repairing a supporting structure, the costs of repairing paintwork or materials, and other akin expenses. In no event shall ASD Laminat's liability under this limited warranty exceed the lesser of the following:

- (1) the sum that is equal to the amount of square meters of the color fastness flawed Panel(s) multiplied by the corresponding square meter price of the Panel(s) in question (excluding VAT), noted on the purchase invoice and paid by the Buyer; or
- (2) the sum of EUR 200,000 (two hundred thousand euros).

All parties associated with ASD Laminat, including but not limited to its employees, associated enterprises, directors, officers, suppliers, agents, and representatives shall also be affected by this limitation of liability. All rights and claims that the Buyer has under this limited warranty expire ten (10) years from the date on which the purchase invoice of the Panel(s) is issued to the Buyer.

#### **5. Exclusions.**

This limited warranty does not cover any flaw in any materials or components other than the color fastness flaw of the Panel(s) that were sold by ASD Laminat to the Buyer, or damages attributed to causes different than the process of manufacturing of the Panel(s), including but not limited to inappropriate, faulty or incorrect handling and/or installation, damages attributed to or arising from the combination or assembly of any such other materials or components with the Panel(s), exposure to corrosive elements in the atmosphere, mildew, normal weathering, the use of harmful cleaning products, windstorm, uprising, vandalism, natural disaster, sandstorm, impact, irrational use, misuse, accidental damage, physical abuse, terrorism, civil disobedience, act of war or any "force majeure" whatsoever.

#### **6. Legal Action.**

Any legal action, suit or proceeding against ASD Laminat arising out of or relating to this limited warranty shall be barred if not commenced within one (1) year of the date the Buyer discovered or should have reasonably discovered that a Panel or Panels fail to conform to this limited warranty.

#### **7. Governing Law and Competent Court.**

This limited warranty shall be governed by and is exclusively subject to Turkish law. The court of law in Istanbul in Turkey has exclusive jurisdiction to hear disputes arising out of this limited warranty. Treaties and uniform laws about the international trade of physical goods (which include but are not limited to the United Nations Convention on Contracts for the International Sale of Goods) are excluded.

#### **8. Disclaimer.**

Except as expressly provided herein, the Panel(s) supplied are sold "as is," and

ASD Laminat expressly disclaims any and all other warranties, express, implied or statutory, including but not limited to warranties of merchantability, fitness for a particular purpose, and any warranties arising from course of dealing or trade usage. This limited warranty is the sole and exclusive warranty provided by ASD Laminat, and supersedes all other warranties, including any based upon oral or written representations. Under no circumstances shall ASD Laminat be liable for any claims, expenses or damages caused by or concerning the absence of conformity to any industrial standard(s) or applicable codes. All other claims made by the Buyer are excluded. Any transfer or assignment of rights by the buyer under this limited warranty shall be void.

Test results, methods and other information about the sample shown in the relevant pages of this Report are based on the information specified in accordance with "Test Request Form (PR03-F01) conveyed to us from the Applicant. Test results are valid for the sample as identified above. Sample may not represent the lot which it belongs. This Report does not replace a Product Certificate. Full report or any part of it may not be reproduced or used for any other purpose without the written permission of EUROLAB Laboratory. Sampling has not been done by us. Unsigned and unsealed Reports are invalid. Analysis as indicated with "\*\*\*" are in the Scope of our Accreditation Certificate issued from UAF according to TS EN ISO/IEC 17020, 17025, Analysis as indicated with "\*\*\*\*" are performed at the external laboratories using accredited test methods according to EN ISO/IEC 17020, 17025 from UAF. Possible extra notes may add with starting "N" to related pages. Tested and remaining samples will be kept in specified terms & conditions at test request and/or proposal form. Physically, chemically and microbiologically decomposed samples are discarded regardless of the storage period. Applicant can not claim any right in this regard. Results are shown in this Report do not include Measurement Uncertainty values. Measurement Uncertainty values are not taken in consideration during Pass/Fail assessment the of test results shown in this Report. Evaluation of the test results using Measurement Uncertainty values is the responsibility of the Applicant.

PR33-F01/08.10.2015/Rev:17.01.2017-R01

## Scope

This part of IEC 61340 specifies test methods for determining the electrical resistance of all types of floor coverings and installed floors with resistance to ground, point-to-point resistance and vertical resistance of between  $10^4 \Omega$  and  $10^{13} \Omega$ .

## Acceptance Testing

A laboratory evaluation apparatus shall be used for acceptance testing or an apparatus with an open-circuit voltage of

-	10 V $\pm$ 0,5 V for resistance below $1,0 \times 10^6 \Omega$
-	100 V $\pm$ 5 V for resistance between $1,0 \times 10^6 \Omega$ and $1,0 \times 10^{11} \Omega$
-	500 V $\pm$ 25 V for resistance above $1,0 \times 10^{11} \Omega$ .

## Conditioning

Time	Temperature	Relative Humidity
48 h	23 °C $\pm$ 2	12 % $\pm$ 3 %

## Procedure

<b>Point-to-point resistance</b>	<p>Place the test specimen with its use-surface uppermost on the insulating plate. Place the two measuring electrodes on the test specimen 300 mm <math>\pm</math> 10 mm distance centre to centre. For tests on installed floors, the electrodes shall be placed on the floor surface with the same distance between them as for laboratory evaluations. Connect the measuring electrodes to the resistance measuring apparatus. Starting with the voltage set to 10 V, take a reading of the resistance 15 s <math>\pm</math> 2 s after applying the test voltage. If the value exceeds <math>10^6 \Omega</math>, select 100 V and repeat the measurement. If the value for this second measurement exceeds <math>10^{11} \Omega</math>, select 500 V and make a final measurement. Record the reading which matches the voltage and resistance range specified, unless either of the following situations occur:</p> <p>a) the measured resistance at 10 V is greater than <math>1,0 \times 10^6 \Omega</math> and the measured resistance at 100 V is less than <math>1,0 \times 10^6 \Omega</math>; or</p> <p>b) the measured resistance at 100 V is greater than <math>1,0 \times 10^{11} \Omega</math> and the measured resistance at 500 V is less than <math>1,0 \times 10^{11} \Omega</math>.</p>
<b>Vertical resistance</b>	<p>Place the counter-electrode on the insulating plate. Place the specimen with its use-surface uppermost on the counter-electrode. Place one measuring electrode on the test specimen with its centre no closer than 100 mm to the test specimen's edges. Connect the measuring and counter-electrode to the resistance measuring apparatus. Starting with the voltage set to 10 V, take a reading of the resistance 15 s <math>\pm</math> 2 s after applying the test voltage. If the value exceeds <math>10^6 \Omega</math>, select 100 V and repeat the measurement. If the value for this second measurement exceeds <math>10^{11} \Omega</math>, select 500 V and make a final measurement. Record the reading which matches the voltage and resistance range specified, unless either of the following situations occur:</p> <p>a) the measured resistance at 10 V is greater than <math>1,0 \times 10^6 \Omega</math> and the measured resistance at 100 V is less than <math>1,0 \times 10^6 \Omega</math>; or</p> <p>b) the measured resistance at 100 V is greater than <math>1,0 \times 10^{11} \Omega</math> and the measured resistance at 500 V is less than <math>1,0 \times 10^{11} \Omega</math>.</p>

**Resistance to ground**

Place the test specimen with its use-surface uppermost on the insulating plate. Place one measuring electrode on the test specimen with its centre no closer than 100 mm to any of the test specimen's edges. Connect the measuring electrode and groundable point to the resistance measuring apparatus. Starting with the voltage set to 10 V, take a reading of the resistance  $15 \text{ s} \pm 2 \text{ s}$  after applying the test voltage. If the value exceeds  $10^6 \Omega$ , select 100 V and repeat the measurement. If the value for this second measurement exceeds  $10^{11} \Omega$ , select 500 V and make a final measurement. Record the reading which matches the voltage and resistance range specified, unless either of the following situations occur:

a) the measured resistance at 10 V is greater than  $1,0 \times 10^6 \Omega$  and the measured resistance at 100 V is less than  $1,0 \times 10^6 \Omega$ ; or

b) the measured resistance at 100 V is greater than  $1,0 \times 10^{11} \Omega$  and the measured resistance at 500 V is less than  $1,0 \times 10^{11} \Omega$ .

**Test Result**

Sample	Type Of Measurement	Measurement	Geometric Mean
ASD Laminat	Resistance To Ground	1,65 M $\Omega$	1,75 M $\Omega$
		1,74 M $\Omega$	
		1,89 M $\Omega$

REPORT : TURT230022633

14 March, 2023

Reporting limit=0.1% (raw material)

SVHC = Substance of very high concern

ND = Not detected (the result is less than the reporting limit)

Reporting limit = Quantitation limit of analyte in sample

Note= Determination was based on elemental analysis. The content was calculated based on assumption of worst-case.

#### Notes:

1. Substances of very high concern (SVHC) are classified as:
  - a. Carcinogenic, mutagenic or toxic to reproduction category 1 (proven on humans) and category 2 (proven on animals)
  - b. Persistent, bioaccumulative and toxic chemicals (PBT)
  - c. Very persistent and very bioaccumulative chemicals (vPvB)
  - d. Other similar substances such as endocrine disrupters
2. If the imported or manufactured volume of each individual SVHC in article is more than 0.1% (w/w) and if it exceeds 1 tonne per year across all product ranges, then importer or manufacturer require notification to the European Chemical Agency (ECHA). For substances included in the Candidate List on or after 1 December 2010, the notifications have to be submitted no later than 6 months after the inclusion. The following information has to be submitted for notification:
  - a. Identification of the registrant and the substance
  - b. Classification and labelling of the substance
  - c. Description of use of the substance and the article
  - d. Registration number, if available
  - e. Tonnage range
3. As per article 31 of regulation (EC) No. 1907/2006 (REACH), suppliers of mixtures not classified as dangerous according to directive 1999/45/EC have to provide the recipients, at their request, with a safety data sheet if the mixtures contain at least one substance on the SVHC candidate list and its individual concentration is 0.1%(w/w) or above for non-gaseous preparations.

#### REACH requirement:

As per article 33(1) of regulation (EC) No. 1907/2006 (REACH), recipients of product must be provided with information of safe use if any of the tested substances (SVHC) exceeded 0.1% (w/w). A product meets the requirement of article 33(1) by default when no SVHC exceeds 0.1% (w/w).

## 4 Test Parameters, Sample Preparation and Deviations

### 4.1 VOC Emission Chamber Test Parameters

Parameter	Value	Parameter	Value

## 4.4 Deviations from Referenced Protocols and Regulations

No deviations from the referenced test methods were observed except the general deviations.

### 4.4.1 General Deviations

Method	Deviation details	Impact on results or correction
EN 717-1 <sup>s</sup>	Sampling flow on DNPH was 300 mL/min. The RH% in the supply air to the chamber was $50 \pm 3\%$ and not $45 \pm 3\%$ during the test. The temperature was $23 \pm 1^\circ\text{C}$ and not $23 \pm 0.5^\circ\text{C}$ . The air change rate was 0.5/h and not 1/h. The sample was tested without open edges unless otherwise stated under sample preparation.	Formaldehyde concentration can be expected to be slightly overestimated compared to EN 717-1 due to the higher RH% and lower air change rate in ISO 16000-9. The E1 limit value of $120 \mu\text{g}/\text{m}^3$ has been recalculated to $\text{SER}_A$ of $120 \mu\text{g}/\text{m}^2/\text{h}$ and compared with the detected $\text{SER}_A$ (in accordance with conclusion presented in CEN TC351 WG2 N174).

## 6 Summary and Evaluation of the Results

### 6.1 Comparison with Limit Values of the French VOC Regulation

	CAS No.	Conc. 28 days $\mu\text{g}/\text{m}^3$	 $\mu\text{g}/\text{m}^3$	 $\mu\text{g}/\text{m}^3$	 $\mu\text{g}/\text{m}^3$	 $\mu\text{g}/\text{m}^3$
TVOC	-	< 2	>2000	<2000	<1500	<1000
Formaldehyde	50-00-0	6.4	>120	<120	<60	<10
Acetaldehyde	75-07-0	< 3	>400	<400	<300	<200
Toluene	108-88-3	< 2	>600	<600	<450	<300
Tetrachloroethylene	127-18-4	< 2	>500	<500	<350	<250
Ethylbenzene	100-41-4	< 2	>1500	<1500	<1000	<750
Xylene	1330-20-7	< 2	>400	<400	<300	<200
Styrene	100-42-5	< 2	>500	<500	<350	<250
2-Butoxyethanol	111-76-2	< 2	>2000	<2000	<1500	<1000
1,2,4-Trimethylbenzene	95-63-6	< 2	>2000	<2000	<1500	<1000
1,4-Dichlorobenzene	106-46-7	< 2	>120	<120	<90	<60

The product was assigned a VOC emission class without taking into account the measurement uncertainty associated with the result. As specified in French Decree no. 2011-321 of March 23 2011, correct assignment of the VOC emission class is the sole responsibility of the party responsible for distribution of the product in the French market.

### 6.2 Comparison with Limit Values of the CMR Components

CMR substances	CAS No.	Conc. 28 days $\mu\text{g}/\text{m}^3$	Max. allowed air concentration $\mu\text{g}/\text{m}^3$
Benzene	71-43-2	< 1	< 1
Trichloroethylene	79-01-6	< 1	< 1
Dibutylphthalate (DBP)*	84-74-2	< 1	< 1
Diethylhexylphthalate (DEHP)*	117-81-7	< 1	< 1

The results are only valid for the tested sample(s).

This report may only be copied or reprinted in its entirety, parts of it only with a written acceptance by Eurofins.

### 6.3 Comparison with Limit Values of AgBB

Parameter	Test after 3 days		Test after 28 days	
	Concentration mg/m <sup>3</sup>	Limit Value mg/m <sup>3</sup>	Concentration mg/m <sup>3</sup>	Limit Value mg/m <sup>3</sup>
TVOC	< 0.005	≤ 10	< 0.005	≤ 1.0
TSVOC	< 0.005	-	< 0.005	≤ 0.1
R-value (dimensionless)	0.084	-	0.064	≤ 1
Sum without NIK	< 0.005	-	< 0.005	≤ 0.1
Formaldehyde	-	-	0.0064	≤ 0.1
Total carcinogens	< 0.001	≤ 0.01	< 0.001	≤ 0.001

Compliance with the limits alone does not entitle to use the AgBB requirements in conjunction with approval by DIBt. This requires an application, site inspection, and approval. See [www.eurofins.com/dibt-procedures](http://www.eurofins.com/dibt-procedures).

### 6.4 Comparison with Limit Values of the Belgian Regulation

Parameter	Test after 28 days	
	Concentration µg/m <sup>3</sup>	Limit Value µg/m <sup>3</sup>
TVOC	< 5	≤ 1000
TSVOC	< 5	≤ 100

Toluene	< 5	≤ 300
Formaldehyde	6.4	≤ 100
Acetaldehyde	< 3	≤ 200

The results are only valid for the tested sample(s).

This report may only be copied or reprinted in its entity, parts of it only with a written acceptance by Eurofins.

## 6.5 Comparison with Limit Values of EMICODE

Parameter	Concentration $\mu\text{g}/\text{m}^3$	EC 2 $\mu\text{g}/\text{m}^3$	EC 1 $\mu\text{g}/\text{m}^3$	EC 1 PLUS $\mu\text{g}/\text{m}^3$

Sum Formaldehyde + Acetaldehyde [ppm]	0.0067	$\leq 0.05$		
Sum carcinogens 3 days	< 1	$\leq 10$		
Sum carcinogens 28 days	< 1	$\leq 1$		

This test report does not alone entitle to use the protected trademark label EMICODE. For the use of an EMICODE label a license has to be applied for at the GEV, Düsseldorf, Germany. A license can only be granted for ready-to use products, if some additional requirements on contents of certain chemicals (e.g. solvent-free) are fulfilled.

Note: The label is supplemented with a final letter R (e.g. EMICODE EC 1 R) for installation products that fulfill the specification in clause 3.1.2 sentence 2 of GEV classification criteria and that therefore may require measures for ensuring occupational safety during application.

## 6.6 Comparison with Limit Values of EN 717-1<sup>s</sup>

Parameter	Concentration $\text{mg}/\text{m}^3$	E2 $\text{mg}/\text{m}^3$	E1 $\text{mg}/\text{m}^3$
Formaldehyde 28 days	0.0064	> 0.10	$\leq 0.10$

The formaldehyde result is based on chamber testing and DNPH sampling according to ISO 16000. The result is therefore not directly according to the EN 717-1, and there are a few small deviations from EN 717-1 (see section on general deviations). The testing is in accordance with conclusions presented in CEN TC351 WG2 N174 where the difference and compatibility between EN 717-1 and ISO 16000 are empirically and theoretically analysed. For results close to the limit value it is recommended to perform an EN 717-1 test for verification.

### 7.3 Sampling Report

## 7.4 How to Understand the Results

### 7.4.1 Acronyms Used in the Report

- < Means less than
  - > Means bigger than
  - \* Not a part of our accreditation
  - α Um(%) is given as 2x RSD%. Please see section regarding Uncertainty in the Appendices.
  - § Deviation from method. Please see deviation section
  - a The method is not optimal for very volatile compounds. For these substances smaller results and a higher measurement uncertainty cannot be ruled out.
  - b The component originates from the wooden panels and is thus removed.
  - c The results have been corrected by the emission from wooden panels.
  - d Very polar organic compounds are not suitable for reliable quantification using tenax TA adsorbent and HP-5 GC column. A high degree of uncertainty must be expected.
- SER Specific emission rate.

### 7.4.2 Explanation of ID Category

#### Categories of Identity:

- 1: Identified and specifically calibrated
- 2: Identified by comparison with a mass spectrum obtained from library and supported by other information. Calibrated as toluene equivalent.
- 3: Identified by comparison with a mass spectrum obtained from a library. Calibrated as toluene equivalent.
- 4: Not identified, calibrated as toluene equivalent.

## 7.5 Applied LCI and NIK Values

### 7.5.1 LCI/NIK Values for Compounds found after 3 Day Measurements

Compound	CAS No.	AgBB 2015 NIK [µg/m³]	Belgian NIK [µg/m³]
None determined	-	-	-

### 7.5.2 LCI/NIK Values for Compounds found after 28 Day Measurements

None determined	-	-	-

## 7.6 Description of VOC Emission Test

### 7.6.1 Test Chamber

The test chamber is made of stainless steel. A multi-step air clean-up is performed before loading the chamber, and a blank check of the empty chamber is performed.

The chamber operation parameters are as described in the test method section. (CEN/TS 16516, ISO 16000-9, internal method no.: 71M549811).

### 7.6.2 Expression of the Test Results

All test results are calculated as specific emissions rate, and as extrapolated air concentration in the European Reference Room (CEN/TS 16516, AgBB, EMI CODE, M1 and Indoor Air Comfort).

### 7.6.3 Testing of Carcinogenic VOCs

The emission of carcinogens (EU Categories C1A and C1B, as per European law) is tested by drawing sample air from the test chamber outlet through Tenax TA tubes after the specified duration of storage in the ventilated test chamber. Analysis is performed by ATD-GC/MS (automated thermal desorption coupled with gas chromatography and mass spectroscopy using 30 m HP-5 (slightly polar) column with 0.25 mm ID and 0.25 µm film, Agilent) (CEN/TS 16516, ISO 16000-6, internal methods no.: 71M549812 / 71M542808B).

All identified carcinogenic VOCs are listed; if a carcinogenic VOC is not listed then it has not been detected. Quantification is performed using the TIC signal and authentic response factors, or the relative response factors relative to toluene for the individual compounds.

This test only covers substances that can be adsorbed on Tenax TA and can be thermally desorbed. If other emissions occur, then these substances cannot be detected (or with limited reliability only).

### 7.6.4 Testing of VOC, SVOC and VVOC

The emissions of volatile organic compounds are tested by drawing sample air from the test chamber outlet through Tenax TA tubes after the specified duration of storage in the ventilated test chamber. Analysis is performed by ATD-GC/MS using HP-5 column (30 m, 0.25mm ID, 0.25µm film) (CEN/TS 16516, ISO 16000-6, internal methods no.: 71M549812 / 71M542808B).

All single substances that are listed with a LC1/NIK value in the latest publications (hereafter referred to as target compounds) are identified if present. All other appearing VOCs are identified as far as possible. Quantification of target compounds is done using the TIC signal and authentic response factors, or the relative response factors relative to toluene. For certain compound groups, which differ significantly in chemistry from toluene, quantification is performed relative to a representative member of the group for more accurate and precise results. This can include quantification of for example glycols and acids. In addition to that, all results are also expressed in toluene equivalents. All non-target compounds, as well as all non-identified substances, are quantified in toluene equivalents.

The results of the individual substances are calculated in three groups depending on their retention time when analyzing using a non-polar column (HP-1):

- Volatile Organic Compounds (VOC) are defined as: All substances eluting between and including n-hexane (n-C6) and n-hexadecane (n-C16)
- Semi-Volatile Organic Compounds (SVOC) are defined as: All substances eluting after n-hexadecane (n-C16) and before and including n-docosane (n-C22)
- Very Volatile Organic Compounds (VVOC) are defined as: All substances eluting before n-hexane (n-C6).

The results are only valid for the tested sample(s).

This report may only be copied or reprinted in its entirety, parts of it only with a written acceptance by Eurofins.

Total Volatile Organic Compounds (TVOC) is calculated by summation of all individual VOCs with a concentration  $\geq 5 \mu\text{g}/\text{m}^3$ . The TVOC can be expressed either in toluene equivalents as defined in CEN/TS 16516 and similar to ISO 16000-6, or as the sum of concentrations using specific or relative response factors. In the case of summation of concentrations using authentic or relative response factors, the toluene equivalent is applied to all non-target and non-identified VOCs before summing up. Compounds regarded as VOC in line with the above definition but elute before n-C6 or after n-C16 on the HP-5 column are treated as VOC, and are thus added to the TVOC.

Total Semi-Volatile Organic Compounds (TSVOC) is calculated by the summation of all individual SVOCs expressed in toluene equivalents with a concentration  $\geq 5 \mu\text{g}/\text{m}^3$ , as defined in CEN/TS 16516. VOCs that are regarded as VOC in line with the above definition, but elute after n-C16 in this test, are not added to the TSVOC.

Total Very Volatile Organic Compounds (TVVOC) is calculated by the summation of all individual VVOCs with a concentration  $\geq 5 \mu\text{g}/\text{m}^3$  and expressed in toluene equivalents. VOCs that are regarded as VOC in line with the above definition, but elute before n-C6 in this test, are not added to the TVVOC.

This test only covers substances which can be adsorbed on Tenax TA and can be thermally desorbed. If emissions of substances outside these specifications occur then these substances cannot be detected (or with limited reliability only).

#### 7.6.5 Calculation of R Values with LCI Lists

The concentrations of detected compounds  $\geq 5 \mu\text{g}/\text{m}^3$  are divided by their respective LCI/NIK value (if defined in the given publication). The sum of the quotients gives the R value, which can be mathematically expressed:

$$R = \sum_{i=1}^n \left( \frac{c_i}{\text{NIK}_i} + \dots + \frac{c_n}{\text{NIK}_n} \right)$$

This R value is calculated, depending on the purpose of this test, for the European LCI list, for the German LCI/NIK list ( $R_D$ ), and/or for the Belgian LCI list ( $R_B$ ).

All VOCs without published LCI/NIK value and concentration  $\geq 5 \mu\text{g}/\text{m}^3$  are summed up as sum of VOCs without LCI/NIK if required by the standard or protocol.

#### 7.6.6 Testing of Aldehydes

The presence of aldehydes after the specified duration of storage in the ventilated test chamber is tested by drawing air samples from the test chamber outlet through DNPH-coated silicagel tubes after the specified duration of storage in the ventilated test chamber. Analysis is performed by solvent desorption and subsequently by HPLC and UV-/diode array detection.

The absence of formaldehyde and other aldehydes is stated if UV detector response at the specific wavelength is lacking at the specific retention time in the chromatogram. Otherwise it is checked whether the reporting limit is exceeded. In this case the identity is finally checked by comparing full scan sample UV spectra with full scan standard UV spectra.

#### 7.6.7 Testing of Phthalates

The presence of phthalates is tested by drawing air samples from the test chamber outlet through tube with XAD-II adsorbent after the specified duration of storage in the ventilated test chamber. Analysis is performed by solvent desorption and subsequently by GC/MS. Analysis of phthalates is not currently covered by the accreditation (Internal methods no.: 71M549812 / 71M546060).

The results are only valid for the tested sample(s).

This report may only be copied or reprinted in its entirety, parts of it only with a written acceptance by Eurofins.

### 7.7 Quality Assurance

Before loading the test chamber, a blank check of the empty chamber is performed and compliance with background concentrations in accordance with CEN/TS 16516 / ISO 16000-9 is determined.

Air sampling at the chamber outlet and subsequent analysis is performed in duplicate. Relative humidity, temperature and air change rate in the chambers is logged every 5 minutes and checked daily. A double determination is performed on random samples at a regular interval and results are registered in a control chart to ensure the uncertainty and reproducibility of the method.

The stability of the analytical system is checked by a general function test of device and column, and by use of control charts for monitoring the response of individual substances prior to each analytical sequence.

### 7.8 Accreditation

The testing methods described above are accredited on line with EN ISO/IEC 17025 by DANAK (no. 522). This accreditation is valid worldwide due to mutual approvals of the national accreditation bodies (ILAC/IAF, see also [www.eurofins.com/galten.aspx#accreditation](http://www.eurofins.com/galten.aspx#accreditation)).

Not all parameters are covered by this accreditation. The accreditation does not cover parameters marked with an asterisk (\*), however analysis of these parameters is conducted at the same level of quality as for the accredited parameters.

### 7.9 Uncertainty of the Test Method

The relative standard deviation of the overall analysis is 22.5%. The expanded uncertainty  $U_m$  equals 2 x RSD. For further information please visit [www.eurofins.dk/uncertainty](http://www.eurofins.dk/uncertainty).

## REPORT

Order No.: 17662/4 Page 1 of 2 pages

Client: ASD Laminat A.Ş  
Organize Sanayi Bölgesi  
81600 Beyköy, Düzce  
Turkey

Date of order: 23 October 2020

Receipt of sample material: 26 October 2020

Origin of sample material: From the client

Purpose: Analysis of a laminate grade for the specific migration behaviour

The present report refers exclusively to the samples as laid out therein. Information and statistical data on the results can be obtained on request.

### **Sample Material**

For analysis the following sample material was in hand:

1 laminate grade without further designation

### **Carrying out of the Tests**

Examination period: 26 October 2020 to 16 November 2020

### **Determination of the Specific Migration \***

The determination was performed according to the series of standards EN 1186:2002-07 and the EN 13130-1:2004-08. If required, the CEN/TS 14234:2003-01 as well as CEN/TS 14235:2003-01 were considered.

The test simulants as well as the contact conditions were chosen in accordance with the requirements of annex III and V of Regulation (EU) No 10/2011.

Conditions: 24 hours at 40 °C

Test simulants: acetic acid 3 % (w/w) (food simulant B)

Testing procedure: one-sided contact (surface)

Repeated use (Repeated test on the same specimen using another portion of food simulant on each occasion)

### **Melamine [108-78-1] \***

The determination was performed according to CEN/TS 13130-27:2005-5 by means of HPLC-UV.

Result:

1st migrate:	not quantifiable	< 0.01	mg/dm <sup>2</sup>
2nd migrate:	not quantifiable	< 0.01	mg/dm <sup>2</sup>
3rd migrate:	not quantifiable	< 0.01	mg/dm <sup>2</sup>

The accreditation applies to the methods marked with \* in the test report (Register no. D-PL-14160-01-01 and D-PL-14160-01-02).
