COMPANY PROFILE

Beijing Lidakang Technology Co., Ltd. (hereinafter referred to as "Lidakang"), established in 1998, is a professional company specializing in the R&D, production, and sales of joint prostheses.

Lidakang was founded by Xu Yingchen, a senior engineer dedicated to the R&D of joint prostheses in the former Central Iron & Steel Research Institute. As early as in its startup stage, Lidakang successfully developed advanced domestic joint prostheses, pioneering the R&D of such products in China. With the participation in projects under the National Torch Program and the "13th Five-Year Plan", Lidakang has won the "Provincial Scientific and Technological Progress Award", the Second Prize for "2021 Medical Device Entrepreneurship Competition", and such honorary titles as "Technology-based SMED", "Beijing Scientific Research Institution", "National Little Giant Firm", and "China Top 100 Future Medical Device Innovation Enterprises". Moreover, it has also taken part in the formulation of group standards for 3D-printed medical devices under the organization of the China Association for Medical Devices Industry (CAMDI), laying a solid foundation for Lidakang to become a national brand that values quality, scientific research, and technology.

Over 20 years, Lidakang has successfully opened up the overseas market and developed into a modern high-tech manufacturer, with such affiliates as Lidakang Institute, R&D Center, Manufacturing Center, Marketing Center, 3D Printing Center, Quality Control Department, Bidding Department, Personnel Administration Department, and Finance Department. In addition to Production Permit and Operating Permit for Class III medical devices, it has also obtained registration certificates for Class I, Class II, and Class III medical devices, such as hip, knee, shoulder, elbow, and tumor prostheses. Having passed ISO 9001:2015 and ISO 13485:2016 certification, it boasts over 100 authorized patents. The UKA prosthesis and tantalum-coated femoral stem developed by Lidakang are the first products launched in China. Joint surgical robots are under R&D now.

Adhering to the aim of "Reach High for the Benefit of Patients", Lidakang has increasingly scaled up production with ever-growing strength.

In 2015, Lidakang Institute was set up in collaboration with top experts in the orthopedic field to customize comprehensive, standardized, and systematic education and training for medical staff in the orthopedic industry and patients suffering from bone diseases, and build a professional and convenient communication platform to strengthen cooperation with clinical experts and draw upon each other's resources. Moreover, Lidakang Institute is also committed to serving orthopedic clinicians and contributing its share in improving the diagnosis and treatment of joint diseases, striving to boost the growth of the orthopedic industry in China.

On the occasion of Lidakang's 20th anniversary in 2018, Lidakang Production and R&D Base was officially put into operation in Zhaoquanying Town, Shunyi District, Beijing. With a building area of more than 8,000 m², it can achieve an annual production capacity of 100,000 joint prostheses. With the design of a production department for surgical instruments, it can meet increasing production demands with the rapid development of Lidakang in the future. In addition to the production workshop, purification and packaging workshop, testing laboratory, chemical examination laboratory, fluorescent flaw detection room, and CNAS laboratory, the base also possesses experts with abundant experience in the R&D of joint prostheses, professors dedicated to microporous materials for decades, and senior experts on nanomaterials. The young and professional talents have grown into Lidakang's greatest asset.

Over the years, Lidakang has cooperated with renowned domestic orthopedic experts and professors by virtue of its technical strength and developed multiple joint prostheses suitable for Chinese people based on advanced design concepts, accumulating a wealth of technical experience in the R&D and manufacturing of tumor prostheses. As one of the long-established joint prosthesis manufacturers in China, Lidakang has always been shouldering its social responsibility and has won extensive recognition by virtue of its excellent product quality and considerate service.
