Our Solution touchECG:
Data Control & Cardioline in Partnership with XXXX Ambulance Services

OUR Solution: ECGWebApp Reporting Tool

The WebApp a unique web ECG Database

- Web technology allows for optimal workflow management, with no compromise, at minimal cost

- Records can be accessed from everywhere by accredited operators, through a browser.

- The ECG is immediately sent to the ECGWebApp at the Emergency Center. If the STEMI is confirmed, the patient is routed to the closest available cath-lab for angioplasty.

- All ECGs taken during the ambulance transfer, as well as those taken during and after the procedures, are stored in ECGWebApp for documenting the patient case and can be transferred in different formats to a final repository or EMR.
