

## Oxidase Test Stick

Rapid test for detection of cytochrome oxidase enzymatic activity.

### DESCRIPTION

Oxidase Test Stick is a diagnostic test used for differentiation and microbial identification, particularly of Gram-negative bacteria, on the basis of the presence of enzyme cytochrome oxidase.

The product matches with recommendations of EN ISO 16266 and ISO 9308-1 for detection of *Pseudomonas aeruginosa* and for confirmation of *Escherichia coli* and coliform bacteria, respectively.

### CONTENTS OF THE PACKAGES

Each package contains 50 Oxidase Test Stick.

### METHOD PRINCIPLE

Oxidase-positive bacteria produces the enzyme cytochrome oxidase (indophenol oxidase) that catalyzes the transport of electrons from donor compounds (NADH) to electron acceptors (usually oxygen).

Tetramethyl-p-phenylenediamine dihydrochloride contained in Oxidase Test Stick acts as an artificial electron donor and is oxidized by oxidase-positive bacteria forming the coloured compound indophenol blue.

### COMPOSITION

Oxidase Test Stick is made of a special paper with a zone impregnated with a solution of N,N,N',N'-tetramethyl-p-phenylenediamine dihydrochloride.

### TEST PROCEDURE

1. Allow container to come to room temperature before opening, for minimizing condensation on the stick.
2. Pick up one or more than one well isolated colony and wipe off by the zone of the stick indicated by arrows. Alternatively, transfer a drop of the suspension of the test organism to the reaction zone of the stick or dip directly the point of the stick into the microbial suspension.
3. Examine for an immediate color change (within 60 seconds) at the position of the inoculated area (NB. The usage of very dilute microbial suspensions may result in longer reactions time)

### INTERPRETING RESULTS

The development of a blue-purple color indicates a positive reaction. No color change corresponds to a negative test, i.e. the organism under investigation does not produce the enzyme cytochrome oxidase.

### LIMITATIONS

The most suitable cultures for the oxidase test are those from culture media without dyes, indicators or inhibitors. Bacterial colonies taken from media with pH values below 5.5 (e.g. after the metabolism of carbohydrates with subsequent acidification of the culture medium) can give a false negative oxidase reaction. Colonies taken from media containing nitrate may give unreliable results. Do not use steel, nichrome or iron containing loops to pick the colony. A platinum or plastic loop, or wooden applicator stick is recommended.

### STORAGE

Store at 2-8°C away from light. Do not use the product beyond its expiry date on the label or if product shows any evidence of contamination or any sign of deterioration.

### SHELF LIFE

2 years.

### QUALITY CONTROL

Control strains are indicated in the QC table.

#### QC Table.

Microorganism	WDCM	Oxidase reaction
<i>Escherichia coli</i>	WDCM 00013	Negative, no color change
<i>Pseudomonas aeruginosa</i>	WDCM 00025	Positive, deep blue-purple coloration

### WARNING AND PRECAUTIONS

The product does not contain hazardous substances in concentrations exceeding the limits set by current legislation and therefore is not classified as dangerous. It is nevertheless recommended to consult the safety data sheet for its correct use. The product is intended for *in vitro* diagnostic use and must be used only by properly trained operators.

### DISPOSAL OF WASTE

Disposal of waste must be carried out according to national and local regulations in force.

## Oxidase Test Stick

Test rapido per la rilevazione dell'attività enzimatica della citocromo ossidasi.

### DESCRIZIONE

Oxidase Test Stick è un test diagnostico utilizzato per la differenziazione e l'identificazione microbica, in particolare dei batteri Gram negativi, sulla base della presenza dell'enzima citocromo ossidasi.

Il prodotto corrisponde alle indicazioni fornite da EN ISO 16266 ed ISO 9308-1 per la ricerca di *Pseudomonas aeruginosa* e la conferma di *Escherichia coli* e batteri coliformi, rispettivamente.

### CONTENUTO DELLE CONFEZIONI

Ogni confezione contiene 50 Oxidase Test Stick.

### PRINCIPIO DEL METODO

I batteri ossidasi positivi producono l'enzima citocromo ossidasi (indofenolo ossidasi) che catalizza il trasporto degli elettroni da un composto donatore (NADH) ad uno accettore (di solito l'ossigeno).

Il tetrametil-p-fenilenediammina dicloroidrato contenuto in Oxidase Test Stick agisce come un donatore artificiale di elettroni e viene ossidato dai batteri ossidasi positivi formando il composto colorato indofenolo blu.

### COMPOSIZIONE

Oxidase Test Stick è realizzato con una carta speciale con una zona impregnata con una soluzione di N,N,N',N'-tetrametil-p-fenilenediammina dicloroidrato.

### PROCEDURA DEL TEST

1. Prima di aprire il contenitore attendere che raggiunga la temperatura ambiente per minimizzare la formazione di condensa sullo stick.
2. Prelevare una o più di una colonia ben isolata e strisciare sulla zona dello stick indicata dalle frecce. In alternativa, trasferire una goccia di sospensione del microrganismo da testare sulla zona di reazione dello stick o immergere direttamente la punta dello stick nella sospensione microbica.
3. Esaminare lo sviluppo di colore (entro 60 secondi) nell'area inoculata (NB. l'uso di sospensioni microbiche molto diluite può causare un'aumento del tempo di reazione).

### INTERPRETAZIONE DEI RISULTATI

Lo sviluppo di un colore blu-viola indica una reazione positiva. Nessun sviluppo di colore corrisponde ad un test negativo, ciò significa che il microrganismo esaminato non produce l'enzima citocromo ossidasi.

### LIMITI

Le colture più adatte per il test dell'ossidasi sono quelle ottenute su terreni di coltura privi di coloranti, indicatori o inibitori. Le colonie batteriche prelevate da terreni con valori di pH inferiori a 5.5 (es. dopo il metabolismo dei carboidrati con conseguente acidificazione del terreno di coltura) possono originare dei risultati falsi negativi. Colonie prelevate da terreni contenenti nitrati possono originare risultati non attendibili. Non utilizzare anse di acciaio, nicromo o anse contenenti ferro per prelevare le colonie. Si consiglia l'utilizzo di anse di platino o plastica, o di bastoncini applicatori in legno.

### CONSERVAZIONE

Conservare a 2-8°C al riparo dalla luce. Non usare il prodotto dopo la sua data di scadenza indicata sull'etichetta o se il prodotto mostra segni di contaminazione o deterioramento.

### DURATA

2 anni.

### CONTROLLO DI QUALITÀ

I ceppi microbici utilizzati per il controllo di qualità sono indicati nella tabella CQ.

#### Tabella CQ.

Microrganismo	Reazione ossidasi	
<i>Escherichia coli</i>	WDCM 00013	Negativa, nessun sviluppo di colore
<i>Pseudomonas aeruginosa</i>	WDCM 00025	Positiva, colorazione blu intenso-viola

### AVVERTENZE E PRECAUZIONI

Il prodotto non contiene sostanze nocive in concentrazioni superiori ai limiti fissati dall'attuale legislazione e perciò non è classificato come pericoloso. Ciononostante si raccomanda di consultare la scheda di sicurezza per il suo corretto uso. Il prodotto è da intendersi per uso diagnostico *in vitro* e deve essere utilizzato esclusivamente da operatori adeguatamente addestrati.

### SMALTIMENTO DEI RIFIUTI

Lo smaltimento dei rifiuti deve essere effettuato in conformità alle normative nazionali e locali in vigore.

## Oxidase Test Stick

Prueba rápida para la detección de la actividad enzimática de la citocromo oxidasa.

### DESCRIPCIÓN

Oxidase Test Stick es una prueba diagnóstica utilizada para la diferenciación e identificación microbiana, especialmente las bacterias Gram-negativas, de acuerdo a la presencia de la enzima citocromo oxidasa.

Este producto sigue las recomendaciones de EN ISO 16266 e ISO 9308-1 para la detección de *Pseudomonas aeruginosa* y para la confirmación de *Escherichia coli* y otras bacterias coliformes, respectivamente.

### CONTENIDO DEL KIT

Cada paquete contiene 50 Oxidase Test Stick.

### PRINCIPIO DEL MÉTODO

Las bacterias Oxidasa-positivas producen la enzima citocromo oxidasa (indófenol oxidasa) que cataliza el transporte de electrones desde el donante (NADH) al receptor (normalmente oxígeno).

La Tetrametil-p-fenilendiamina dihidrocloruro contenida en el Oxidase Test Stick actúa como donante de electrones artificial y se oxida por las bacterias oxidasa-positivas formando el indófenol, compuesto coloreado de azul.

### COMPOSICIÓN

Oxidase Test Stick está fabricado con un papel especial impregnado con una solución de N,N,N',N'-tetrametil-p-fenilendiamina dihidrocloruro.

### PROCEDIMIENTO DE LA PRUEBA

1. Atemperar el kit antes de utilizarlo para minimizar los efectos de condensación.
2. Retirar una o varias colonias bien aisladas y restregar en la zona del stick señalada con flechas. También se puede transferir una gota de la suspensión del organismo a analizar a la zona de reacción del stick o sumergir directamente la punta del stick en la suspensión microbiana.
3. Examinar el posible viraje de color inmediatamente (antes de 60 segundos) en la zona donde se ha inoculado (Nota. El uso de suspensiones muy diluidas puede prolongar los tiempos de reacción).

### INTERPRETACIÓN DE LOS RESULTADOS

El desarrollo de una coloración azul-púrpura intensa indica una reacción positiva. La invariación del color significa una reacción negativa, es decir, que el organismo a analizar no produce la enzima citocromo oxidasa.

### LÍMITES

Los medios de cultivo más aconsejables para esta prueba, son aquellos que no contienen colorantes, indicadores o inhibidores. Las colonias bacterianas retiradas del medio con valores de pH inferiores a 5.5 (debido al metabolismo de los hidratos de carbono y la posterior acidificación del medio) pueden dar falsos negativos. Las colonias extraídas de medios que contengan nitratos pueden dar resultados no fiables. No utilizar hisopos o asas de acero, níquel cromo o hierro para retirar las colonias. Se recomienda que sean de plástico o utilizar aplicadores de madera.

### ALMACENAMIENTO

Almacenar a 2-8°C fuera del alcance de la luz. No utilizar el producto pasada la fecha de caducidad o si muestra alguna señal de contaminación o deterioro.

### VIDA ÚTIL

2 años.

### CONTROL DE CALIDAD

Las cepas de control se indican en la tabla CC.

#### Tabla CC.

Microorganismo	Reacción de la oxidasa	
<i>Escherichia coli</i>	WDCM 00013	Negativa, sin cambio de color
<i>Pseudomonas aeruginosa</i>	WDCM 00025	Positiva, coloración azul-púrpura intensa

### ADVERTENCIAS Y PRECAUCIONES

Este producto no contiene sustancias peligrosas en concentraciones que excedan los límites fijados por la legislación actual y no está clasificado como peligroso. Se recomienda de todas formas la lectura de la hoja de seguridad para el uso apropiado. El producto está pensado para un uso exclusivo *in-vitro* y debe ser utilizado sólo por operadores debidamente adiestrados.

### DESECHO DE RESÍDUOS

El desecho de los residuos debe realizarse según la regulación nacional y local vigente.

## MUELLER HINTON AGAR

Medium for susceptibility test (Kirby-Bauer method).

### TYPICAL FORMULA (g/L)

Meat Extract	2.0
Casamino Acids, Technical	17.5
Starch	1.5
Agar	15.0
Final pH 7.3 ± 0.1	

### DESCRIPTION

MUELLER HINTON AGAR is used for antimicrobial susceptibility testing of rapidly growing aerobic microorganisms by the disk diffusion technique.

### PRINCIPLE

Casamino acids and meat extract are a source of amino acids, nitrogen, minerals, vitamins, carbon and other factors which increase the growth of microorganisms. Starch acts as a protective substance against toxic molecules which can be present in the medium. Hydrolysis of starch during sterilization supplies a little amount of glucose which represents a source of energy. Agar is the solidifying agent. Kirby-Bauer method is based on the diffusion, through the agar, of antimicrobial substances which soaks paper disks: microorganism growth shows an inhibition halo around the disk and the diameter of the halo is correlated to the Minimal Inhibiting Concentration (MIC).

### PREPARATION

Suspend 36.0 g of powder in 1 litre of distilled or deionized water. Heat to boiling and shake until completely dissolved. Sterilize in autoclave at 121°C for 15 minutes. Dispense in final containers.

### TECHNIQUE

Transfer 4-5 colonies in an appropriate broth.

Place it in a 37°C incubator until an opacity is obtained equivalent to the standard opacity of 0.5 on the MacFarland scale. Introduce a sterile swab into the inoculum and inoculate the agar passing 2 or 3 times onto the entire surface.

Press the disk containing the antimicrobial on the agar surface.

Incubate at 36±1°C for 18 hours, measure the inhibition zone with a compass and compare to the NCCLS recommended zone ranges.

### INTERPRETATION OF RESULTS

Compare obtained values of inhibition halo diameter with the values reported on NCCLS M100(M2) document.

### STORAGE

10-30°C away from light, until the expiry date on the label or until signs of deterioration or contamination are evident.

### WARNING and PRECAUTIONS

The product is not classified as hazardous by current legislation and does not contain harmful substances in concentrations of ≥1%. The product is designed for *In vitro* diagnostic use and must be used only by properly trained operators.

### DISPOSAL of WASTE

Disposal of waste must be carried out according to national and local regulations in force.

## Sabouraud Dextrose Agar

Medium for the cultivation and enumeration of yeasts and moulds from different materials, according to EN ISO 11133 and USP/EP/JP.

### DESCRIPTION

Sabouraud Dextrose Agar (SDA) is a non selective isolation medium used for the growth and maintenance of pathogenic and non-pathogenic fungi from clinical and nonclinical specimens. It is also used for recovery and total counting of yeasts and moulds in environmental monitoring.

This medium complies with EN ISO 11133 for microbiological examination of food, animal feed and water, where it is described as the main reference medium to carry out quantitative testing on culture media intended for fungi.

Its formula conforms to the recommendations of the harmonized method in the United States Pharmacopoeia (USP), European Pharmacopoeia (EP) and Japanese Pharmacopoeia (JP) for the microbiological examination of non sterile products. The medium is also available as gamma-irradiated triple bagged plates, particularly suitable for use in restricted areas like isolators and clean rooms.

### TYPICAL FORMULA

	(g/l)
Pancreatic Digest of Casein	5.0
Peptic Digest of Animal Tissue	5.0
Dextrose	40.0
Agar	15.0
Final pH 5.6 ± 0.2 at 25°C	

### METHOD PRINCIPLE

Pancreatic digest of casein and peptic digest of animal tissue provide amino acids, nitrogen, carbon, vitamins and minerals for organisms growth. Dextrose is an energy source. Agar is the solidifying agent. The high concentration of dextrose and the acidic pH of the medium permit selectivity of fungi.

The medium can be supplemented with chloramphenicol to increase bacterial inhibition and recovery of dermatophytes.

### PREPARATION

<u>Dehydrated medium</u>	Suspend 65 g of the powder in 1 liter of distilled or deionized water. Mix well. Heat to boil shaking frequently until completely dissolved. Sterilize in autoclave at 121°C for 15 minutes.
<u>Medium in bottles</u>	Melt the content of the bottle in a water bath at 100°C (loosing the cap partially removed) until completely dissolved. Then screw the cap and check the homogeneity of the dissolved medium, if it is the case turning the bottle upside down. Cool at 45-50°C, mix well avoiding foam formation and aseptically distribute into Petri dishes.

### TEST PROCEDURE

#### For use in medical microbiology

Streak the specimen as soon as possible after it is received in the laboratory to obtain isolated colonies. Prepared tubed slants primarily are intended for use with pure cultures for maintenance or other purposes. Incubation conditions may vary according to the type of specimen and the microorganisms being tested for.

#### For use in food, animal feed and water testing

Refer to EN ISO 11133 for specific instructions.

#### For use in industrial microbiology

##### Control of non-sterile products

Refer to the procedure described in the harmonized chapters of the Pharmacopoeia.

##### Passive Air Monitoring

Take the lid off the settle plate and leave the medium exposed to the air for a period of time no longer than 4 hours (settling plates filled with 30 ml of medium may compensate for water loss during extended incubation periods). Plates can be placed according to the 1/1/1 scheme (for 1 h, about 1 above the floor, at least 1 m from the walls or any obstacle).

##### Surfaces and Personnel Hygiene Monitoring

Take a swab sample for irregular surfaces or use the sampling template 10x10 (ref. 96762) to sample a well defined area of the test surface. Inoculate a 90 mm plate by streaking the swab over the agar surface. Furthermore, the medium is suitable for personnel hygiene monitoring to detect microbial contamination of gloves or hands e.g. in a 5-finger-print.

Incubate the plates at 20-25°C for 5-7 days or at 30-35°C for 24-48 hours.

### INTERPRETING RESULTS

Transfer of growth from slants to plated media may be required in order to obtain pure cultures of fungi. Examine for fungal colonies exhibiting typical microscopic and colonial morphology. Biochemical tests may be required for final identification.

The total combined yeasts/moulds count (TYMC) is considered to be equal to the number of CFU found per each plate. When an acceptable criterion for microbiological quality is prescribed it is interpreted as follows:

- 10<sup>1</sup> CFU: maximum acceptable count = 20;
- 10<sup>2</sup> CFU: maximum acceptable count = 200;
- 10<sup>3</sup> CFU: maximum acceptable count = 2000, and so forth.

In procedures intended for environmental and personnel hygiene monitoring, observe daily for the formation of colonies.

**APPEARANCE**

Dehydrated medium: free-flowing, homogeneous, light beige.

Prepared medium: slightly opalescent, light amber.

**STORAGE**

The powder is very hygroscopic, store the powder at 10-30°C, in a dry environment, in its original container tightly closed. Store bottles, tubes and prepared plates at 10-25°C away from light. Do not use the product beyond its expiry date on the label or if product shows any evidence of contamination or any sign of deterioration.

**SHELF LIFE**

Dehydrated medium: 4 years.

Medium in bottles: 2 years.

Medium in tubes: 1 year.

Ready-to-use plates (90 and 60 mm): 6 months.

Contact plates (55 mm): 9 months

**QUALITY CONTROL**

The medium is inoculated with the microbial strains indicated in the QC table.

Inoculum for productivity: 50-100 CFU.

Incubation conditions: 32.5 ± 2.5°C for 24-48 h (*C. albicans*) and at 22.5 ± 2.5°C for up to 5 days (all listed organisms), under aerobic atmosphere.

**QC Table.**

Microorganism		Growth
<i>Candida albicans</i>	WDCM 00054	Good
<i>Aspergillus brasiliensis</i>	WDCM 00053	Good
<i>Saccharomyces cerevisiae</i>	WDCM 00058	Good

**WARNING AND PRECAUTIONS**

The product does not contain hazardous substances in concentrations exceeding the limits set by current legislation and therefore is not classified as dangerous. It is nevertheless recommended to consult the safety data sheet for its correct use. The product is intended for *in vitro* diagnostic use and must be used only by properly trained operators.

**DISPOSAL OF WASTE**

Disposal of waste must be carried out according to national and local regulations in force.

## Sabouraud Dextrose Agar

Terreno per la coltivazione ed il conteggio di lieviti e muffe da diversi materiali, secondo EN ISO 11133 ed USP/EP/JP.

### DESCRIZIONE

Sabouraud Dextrose Agar (SDA) è un terreno non selettivo utilizzato per la crescita ed il mantenimento di funghi patogeni e non patogeni da campioni clinici e non clinici. È anche utilizzato per il recupero ed il conteggio totale di lieviti e muffe nel monitoraggio ambientale.

Questo terreno è conforme con EN ISO 11133 per l'esame microbiologico degli alimenti, mangimi ed acqua, dove viene descritto come principale terreno di riferimento per effettuare test quantitativi su terreni di coltura specifici per funghi.

Il terreno è formulato secondo le raccomandazioni del metodo armonizzato nelle Farmacopee Statunitense (USP), Europea (EP) e Giapponese (JP) per l'esame microbiologico dei prodotti non sterili. Disponibile anche come piastre confezionate in triplo involucro sottovuoto, sterilizzate a raggi gamma, idonee per l'impiego nelle aree microbiologicamente controllate, come isolatori e camere bianche.

FORMULA TIPICA	(g/l)
Digerito Pancreatico di Caseina	5.0
Digerito Peptico di Tessuti Animali	5.0
Destrosio	40.0
Agar	15.0
pH Finale 5.6 ± 0.2 a 25°C	

### PRINCIPIO DEL METODO

Digerito pancreatico di caseina e digerito peptico di tessuti animali forniscono aminoacidi, azoto, carbonio, vitamine e minerali che supportano la crescita dei microrganismi. Il destrosio è una fonte di energia. L'agar è l'agente solidificante. L'alta concentrazione di destrosio ed il pH acido del terreno determinano la selettività per i funghi.

Al terreno può essere aggiunto il cloramfenicolo per incrementare l'inibizione batterica ed il recupero dei dermatofiti.

### PREPARAZIONE

<u>Terreno disidratato</u>	Sospendere 65 g di polvere in 1 litro di acqua distillata o deionizzata sterile. Mescolare bene. Riscaldare agitando di frequente e bollire fino a completa dissoluzione. Sterilizzare in autoclave a 121°C per 15 minuti.
<u>Terreno in flaconi</u>	Sciogliere il contenuto di un flacone in bagnomaria a 100°C (con i tappi leggermente svitati) fino a completa dissoluzione del terreno. Verificare, una volta fuso, la buona omogeneità del terreno capovolgendo il flacone dopo averne avvitato il tappo. Raffreddare a 45-50°C, mescolare bene senza formazione di bolle. Versare in piastre Petri in condizioni di asepsi.

### PROCEDURA DEL TEST

#### Per l'uso in microbiologia medica

Strisciare il campione clinico il prima possibile dopo il suo arrivo in laboratorio per ottenere colonie isolate.

Le provette pronte con terreno solidificato a becco di clarino sono principalmente destinate all'uso con colture pure per il mantenimento o per altri scopi.

Le condizioni di incubazione possono variare in funzione della tipologia del campione e del microrganismo testato.

#### Per l'uso nell'esame di alimenti, mangimi ed acque

Far riferimento ad EN ISO 11133 per istruzioni specifiche.

#### Per l'uso nella microbiologia industriale

##### Controllo di prodotti non sterili

Far riferimento alle procedure descritte nei capitoli armonizzati della Farmacopea.

##### Monitoraggio Passivo dell'Aria

Rimuovere il coperchio dalla piastra e lasciare il terreno esposto all'aria per un periodo di tempo non superiore alle 4 ore (le piastre per sedimentazione - settle plate - riempite con 30 ml di terreno possono compensare la disidratazione del terreno durante lunghi periodi di incubazione). Le piastre possono essere posizionate secondo lo schema 1/1/1 (per 1 ora, circa 1 m dal pavimento, almeno 1 m dalle pareti o da altri ostacoli).

##### Monitoraggio dell'Igiene delle Superfici e del Personale

Utilizzare un tampone per il campionamento di superfici irregolari o servirsi del sampling template 10x10 (ref. 96762) per campionare una area ben definita della superficie da esaminare. Inoculare una piastra da 90 mm strisciando il tampone sulla superficie dell'agar. Inoltre, il terreno è adatto per il monitoraggio dell'igiene del personale e la determinazione della contaminazione microbica di guanti o mani (5-finger-print).

Incubare le piastre a 20-25°C per 5-7 giorni o a 30-35°C per 24-48 ore.

### INTERPRETAZIONE DEI RISULTATI

Può essere necessario trasferire la crescita dalle provette con terreno a becco di clarino a terreni in piastra per ottenere colture fungine pure.

Esaminare la colonia che mostrano morfologia tipica. L'identificazione finale può richiedere test biochimici.

La conta totale combinata lieviti/muffe (TYMC) viene considerata equivalente al numero di UFC trovate per ciascuna piastra. Quando è prescritto un criterio per stabilire la qualità microbiologica, i risultati sono interpretati come di seguito indicato:

- 10<sup>1</sup> CFU: conta massima accettabile = 20;
- 10<sup>2</sup> CFU: conta massima accettabile = 200;
- 10<sup>3</sup> CFU: conta massima accettabile = 2000, e così via.

Nelle procedure destinate al monitoraggio dell'igiene ambientale e del personale, osservare giornalmente la formazione di colonie.

**ASPETTO**

Terreno disidratato: omogeneo, fine granulometria, beige chiaro.  
Terreno preparato: ambra chiaro, leggermente opalescente.

**CONSERVAZIONE**

La polvere è fortemente igroscopica, conservare a 10-30°C, in ambiente asciutto, nel suo contenitore originale chiuso ermeticamente. Conservare i flaconi, le provette e le piastre pronte a 10-25°C al riparo dalla luce. Non usare il prodotto dopo la sua data di scadenza indicata sull'etichetta o se il prodotto mostra segni di contaminazione o deterioramento.

**VALIDITÀ**

Terreno disidratato: 4 anni.  
Terreno in flaconi: 2 anni.  
Terreno in provette: 1 anno.  
Piastrre pronte all'uso (90 e 60 mm): 6 mesi.  
Piastrre da contatto (55 mm): 9 mesi.

**CONTROLLO DI QUALITÀ**

Il terreno viene inoculato con i ceppi microbici indicati nella tabella CQ.  
Inoculo per produttività: 50-100 UFC.  
Condizioni di incubazione: aerobica, a  $32.5 \pm 2.5^\circ\text{C}$  per 24-48 ore (*C. albicans*) o a  $22.5 \pm 2.5^\circ\text{C}$  fino a 5 giorni (tutti i microrganismi elencati).

**Tabella CQ.**

Microrganismo		Crescita
<i>Candida albicans</i>	WDCM 00054	Buona
<i>Aspergillus brasiliensis</i>	WDCM 00053	Buona
<i>Saccharomyces cerevisiae</i>	WDCM 00058	Buona

**AVVERTENZE E PRECAUZIONI**

Il prodotto non contiene sostanza nocive in concentrazioni superiori ai limiti fissati dall'attuale legislazione e perciò non è classificato come pericoloso. Ciononostante si raccomanda di consultare la scheda di sicurezza per il suo corretto uso. Il prodotto è da intendersi per uso diagnostico *in vitro* e deve essere utilizzato esclusivamente da operatori adeguatamente addestrati.

**SMALTIMENTO DEI RIFIUTI**

Lo smaltimento dei rifiuti deve essere effettuato in conformità alle normative nazionali e locali in vigore.

## Sabouraud Dextrose agar

Medio para el cultivo, aislamiento y conteo de hongos y levaduras a partir de diferentes materiales, de acuerdo con EN ISO 11133 y USP/EP/JP.

### DESCRIPCIÓN

El Sabouraud Dextrose Agar (SDA) es un medio de aislamiento no selectivo utilizado para el crecimiento y mantenimiento de hongos patógenos y no patógenos a partir de muestras clínicas y no clínicas. Se utiliza también para la recuperación y conteo de hongos y levaduras en control ambiental.

Este medio sigue la ISO 11133 para análisis microbiológicos de alimentos humanos, animales y análisis de agua, donde se describe como el medio de referencia para llevar a cabo un análisis cuantitativo en medios de cultivo destinado para los hongos.

Su formulación sigue las recomendaciones de los métodos armonizados de la Farmacopea de los Estados Unidos (USP), Farmacopea Europea (EP) y Farmacopea Japonesa (JP), para el control microbiológico de productos no estériles. Este medio también está disponible en placas Petri con envoltura triple, aconsejadas para zonas restringidas aisladas como salas blancas.

### FÓRMULA (g/l)

Digerido Pancreático de Caseína	5.0
Digerido Péptico de Tejido Animal	5.0
Dextrosa	40.0
Agar	15.0

pH Final 5.6 ± 0.2 at 25°C

### PRINCIPIO DEL MÉTODO

El digerido pancreático de caseína y el digerido péptico de tejido animal suministran los aminoácidos, nitrógeno, carbono, vitaminas y minerales necesarios para el crecimiento de los microorganismos. La Dextrosa es la fuente de energía. El agar es el agente solidificante. La elevada concentración de dextrosa y la acidez del pH del medio, confieren la selectividad por los hongos.

Se puede añadir cloranfenicol como suplemento para aumentar la inhibición bacteriana y recuperación de dermatofitos.

### PREPARACIÓN

Medio deshidratado Suspender 65 g del polvo deshidratado en 1 litro de agua destilada o desionizada. Mezclar bien. Calentar hasta la ebullición removiendo frecuentemente hasta la completa disolución. Esterilizar en autoclave a 121°C durante 15 minutos.

Medio en botellas Disolver el contenido de la botella en un baño con agua a 100°C (con el tapón ligeramente desenroscado) hasta su completa disolución. Comprobar la homogeneidad del medio disuelto, girar la botella si es necesario para ayudar a la homogeneización. Enfriar a 45-50°C, mezclar bien evitando la formación de burbujas y distribuir en placas Petri de forma aseptica.

### PROCEDIMIENTO DEL TEST

#### Uso clínico

Cultivar la muestra tan pronto como sea posible después de haberla recibido en el laboratorio para obtener colonias aisladas

Los tubos semitendidos se usan sobre todo con cultivos puros para mantenimiento y otros objetivos.

Las condiciones de incubación pueden variar según el tipo de muestra y los microorganismos que busquemos.

#### Uso alimentario humano, animal y análisis de aguas

Seguir la EN ISO 11133 para instrucciones particulares.

#### Uso industrial

##### Control de productos no estériles

Seguir el procedimiento descrito en los capítulos armonizados de la Farmacopea.

##### Control pasivo del aire

Retirar la tapa de la placa y dejar el medio expuesto al aire durante un tiempo no superior a 4 horas (las placas de asentamiento llenas - settle plate - con 30 ml de medio pueden compensar la pérdida de agua durante los períodos de incubación prolongados). Las placas se pueden posicionar de acuerdo al esquema 1/1/1 (durante 1 h, aproximadamente 1 sobre el suelo, y por lo menos a 1 m de las paredes y otros obstáculos).

##### Superficies y control de la higiene personal

Utilizar un tampon para muestras para superficies irregulares o utilizar el modelo de muestreo 10x10 (ref. 96762) para controlar un área definida de la superficie a controlar. Inocular una placa de 90 mm por estriación frotando el tampon contra la superficie agarizada. Además, el medio es aconsejable para el control de la higiene personal para detectar contaminaciones microbianas en guantes o manos.

Incubar las placas a 20-25°C durante 5-7 días ó a 30-35°C durante 24-48 horas.

### INTERPRETACIÓN DE LOS RESULTADOS

La transferencia del crecimiento desde tubos semitendidos a placas Petri puede ser necesaria para obtener cultivos puros de hongos. Examinar las colonias con morfología característica. Tests bioquímicos pueden ser necesarios para una identificación final. El conteo total combinado de hongos/levaduras (TYMC) se considera como similar al número CFU encontrado por placa.

Cuando se relata un criterio de calidad microbiológica se interpreta como se explica a continuación:

- 10<sup>1</sup> CFU: conteo máximo aceptable = 20;
- 10<sup>2</sup> CFU: conteo máximo aceptable = 200;
- 10<sup>3</sup> CFU: conteo máximo aceptable = 2000, y así sucesivamente.

Incubar las placas a 20-25°C durante 5-7 días ó a 30-35°C durante 24-48 horas.

**ASPECTO**

Medio deshidratado: suelto, homogéneo, beige claro.  
Medio preparado: ligeramente opalescente, ámbar claro.

**ALMACENAMIENTO**

El polvo deshidratado es muy higroscópico, almacenar a 10-30°C, en un entorno seco, en su frasco original correctamente cerrado. Almacenar las botellas y las placas preparadas a 10-25°C fuera del contacto de la luz. No utilizar el producto fuera de la fecha de caducidad descrita en la etiqueta o si el producto presenta alguna muestra de deterioro o contaminación.

**SHELF LIFE**

Medio deshidratado: 4 años.  
Medio en botellas: 2 años.  
Medio en tubos: 1 año.  
Placas preparadas (90 y 60 mm): 6 meses.  
Placas de contacto (55 mm): 9 meses.

**CONTROL DE CALIDAD**

Las placas se inoculan con las cepas indicadas en la siguiente tabla.  
Inóculo para productividad: 50-100 CFU  
Condiciones de incubación: 32.5 ± 2.5°C durante 24-48 h (*C. albicans*) y 22.5 ± 2.5°C hasta un máximo de 5 días (todos los organismos citados), en ambiente aeróbico.

**Tabla CC.**

Microorganismo		Crecimiento
<i>Candida albicans</i>	WDCM 00054	Bueno
<i>Aspergillus brasiliensis</i>	WDCM 00053	Bueno
<i>Saccharomyces cerevisiae</i>	WDCM 00058	Bueno

**ADVERTENCIAS Y PRECAUCIONES**

Este producto no contiene sustancias peligrosas en concentraciones que excedan los límites fijados por la legislación actual y no está clasificado como peligroso. Se recomienda de todas formas la lectura de la hoja de seguridad para el uso apropiado. El producto está pensado para un uso exclusivo de diagnóstico *in vitro* y debe ser utilizado sólo por operadores debidamente adiestrados.

**DESECHO DE RESIDUOS**

El desecho de los residuos debe realizarse según la regulación nacional y local vigente.

## BILE BACTERIOLOGICAL

Bacteriological bile obtained by bile purification.

### USE

BILE BACTERIOLOGICAL is ox bile purified and dehydrated. It's a fine beige powder, easily soluble in water. It contains a mix of biliary salts and is used in media for enterobacteria, as selective agent, and for identification of enterococci.

### PHYSICO-CHEMICAL CHARACTERISTICS

	Standard	Method
Solubility in water at 5%	Complete	Eur.Ph.3rd ed.
pH of 5% solution	5.5-7.5	Eur.Ph.3rd ed.
Loss on drying	≤ 5.0%	Eur.Ph.3rd ed.
Bile acids	≥ 45.0%	Eur.Ph.10th ed.

### TECHNIQUE

Bile Bacteriological can be used as an ingredient of dehydrated culture media and need dissolution in distilled or deionized water and sterilization by autoclaving.

### QUALITY CONTROL

Dehydrated powder

Appearance: free-flowing, homogeneous.

Colour: beige.

### STORAGE

The powder is very hygroscopic: store the powder at 10-30 °C, in a dry environment, in its original container tightly closed and use it before the expiry date on the label or until signs of deterioration or contamination are evident.

### REFERENCES

## PEPTONE BACTERIOLOGICAL

Peptone obtained by enzymatic hydrolysis of animal tissue.

### USE

PEPTONE BACTERIOLOGICAL is an enzymatic hydrolysate of meat that supplies a limpid, colorless and very stable watery solution. It is used in the preparation of culture media as a nitrogen source readily available for bacterial growth. It is a general use very nutritive peptone, with neutral pH.

### PHYSICO-CHEMICAL CHARACTERISTICS

	Standard
Solubility in water at 2%	Complete
pH of 2% solution	7.0+/-0.5
Loss on drying	≤ 6.0%
Total nitrogen	>12.5%
α-amino nitrogen AN	3-4.5%
Ash	5.0%

### TECHNIQUE

Peptone Bacteriological can be used as an ingredient of dehydrated culture media and need dissolution in distilled or deionized water and sterilization by autoclaving.

### QUALITY CONTROL

Dehydrated powder

Appearance: free-flowing, homogeneous.

Color: cream.

### STORAGE

The powder is very hygroscopic: store the powder at 10-30 °C, in a dry environment, in its original container tightly closed and use it before the expiry date on the label or until signs of deterioration or contamination are evident.

## PEPTONE BACTERIOLOGICAL

Peptona obtenida a través de la hidrólisis enzimática de tejidos de origen animal.

### DESCRIPCIÓN

TRYPTONE es un hidrolizado enzimático de carne que suministra una solución acuosa límpida, incolora y estable. Se utiliza en la preparación de medios de cultivo microbiológicos como fuente de nitrógeno. Es una peptona de uso general con pH neutro

### CARACTERÍSTICAS FÍSICO - QUÍMICAS

	Estándar
Solubilidad en agua al 2%	Completa
pH (solución al 2%)	7.2 ± 0.5
Pérdida después de secado	≤ 6.0%
Nitrógeno total	>12.5%
α-amino nitrógeno AN	3-4,5 %
Residuo de combustión	≤ 5.0%

### TÉCNICA

PEPTONE Bacteriological puede utilizarse como ingrediente para medios de cultivo deshidratados y debe ser disuelto en agua destilada o desionizada y esterilizado mediante el uso de un autoclave.

### CONTROL DE CALIDAD

Medio deshidratado

Aspecto: suelto, homogéneo

Color: crema

### ALMACENAMIENTO

El polvo deshidratado es muy higroscópico, almacenar a 10-30°C, en un entorno seco, en su frasco original correctamente cerrado. No utilizar el producto fuera de la fecha de caducidad descrita en la etiqueta o si el producto presenta alguna muestra de deterioro o contaminación.

## DICHIARAZIONE DI CONFORMITÀ CE / EC DECLARATION OF CONFORMITY

### DICHIARAZIONE DI CONFORMITÀ CE

La società Liofilchem® S.r.l., con Sede Legale in Via Scozia, 64026 Roseto degli Abruzzi (TE) Italia, in qualità di fabbricante del dispositivo medico-diagnostico *in vitro* elencato nella tabella allegata Revisione 31.0 del 08.01.2016

dichiara sotto la propria responsabilità

1. che il dispositivo sopra indicato soddisfa tutte le disposizioni applicabili della Direttiva 98/79/CE (Allegato III) recepita nella Legislazione Italiana dal Decreto Legislativo n° 332 del 8 settembre 2000;
2. che il dispositivo in oggetto non è incluso nell'Allegato II, lista A e B della Direttiva 98/79/CE
3. che la documentazione tecnica di cui all'allegato III della direttiva Direttiva 98/79/CE è a disposizione delle autorità nazionali presso la sua sede e sarà conservata per 5 anni dall'ultima data di fabbricazione del prodotto;
4. che il processo di fabbricazione segue adeguati principi di assicurazione della qualità;
5. di aver attivato e di mantenere aggiornato, un sistema di sorveglianza post-produzione per il monitoraggio dei prodotti;
6. che il dispositivo in oggetto è stato messo in commercio munito di marcatura CE.

---

### EC DECLARATION OF CONFORMITY

The company Liofilchem® S.r.l., registered office in Via Scozia, 64026 Roseto degli Abruzzi (TE) Italy, as a manufacturer of the *in vitro* medical-diagnostic device listed in the attached table, Revision 31.0 of 08.01.2016

hereby certifies under its own responsibility

1. that the above mentioned device complies with all the applicable provisions of Directive 98/79/EC (Annex III) and its relevant transposition into national law;
2. the above mentioned is not included in Annex II, List A and B of Directive 98/79/EC;
3. that the technical documentation referred to at Annex III of the Directive 98/79/EC is available for the national authorities in its facility and that this documentation shall be kept for 5 years after the last product has been manufactured;
4. that the manufacturing process follows suitable principles of quality assurance;
5. that, has implemented and keep up to date, a post-production surveillance system for monitoring the products;
6. that the device in question, was introduced into the market provided with CE mark.

Roseto, 08.01.2016
