Wet / Liquid Gel

Wet Gel electrodes could fast catch the ECG signal. They give dependable quick tracing with easy application and removal.

Recommended for: ·EMS ·Emergency

B5050W

Lot 42

Item#	Size(mm)	Description	Package
B4346W	43*46	Adult/Oval	50/pk, 1000/ cs
B5050W	50*50	Adult / Round	50/pk, 1000/ cs

ABR Test / EEG

To perform an ABR test, electrodes are placed on the surface of the skin at the patient's head. Good signal quality is achieved by preparation of the skin, improving the conductivity. An electrical potential with very low amplitudes is amplified and recorded, while the ABR system delivers acoustical stimuli to the ears.
