Aecta-C° STAND ALONE

ANTERIOR CERVICAL INTERBODY FUSION DEVICE

MODULAR DESIGN OFFERS FREEDOM OF CHOICE

Mecta-C[®] STAND ALONE

ACDF STAND

MECTA-C STAND ALONE

Mecta-C Stand Alone is indicated for use in patients suffering from Degenerative Disc Disease at multiple contiguous levels from C2 to T1.

ANGULAR STABILITY

- Divergent & Convergent screws combination
 - Increased pull-out strength
 - Enhanced in-situ primary stability

SIMPLICITY

Designed to simplify the surgical steps through an **easy and controlled implantation**.

Four plate configurations and angled instruments to cover different needs and **challenging anatomies**.

BONE GRAFT VOLUME

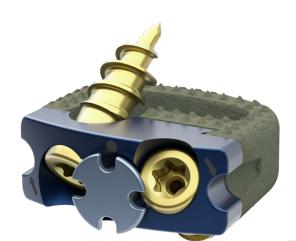

Wide central bone **graft area** may help to accelerate the occurrence of fusion through the implant.

CLEAR FUSION ASSESSMENT

- Radiolucent TiPEEK cage
- Titanium marker with limited image artifact
- Accurate reference for diagnostic assessment

TIPEEK TECHNOLOGY

The modular Mecta-C Stand Alone system in conjunction with the TiPEEK bioactive^[1] plasma-sprayed titanium coated cages, provides value to improved stability and enhanced **fusion** rate.

ALONE SOLUTION

VERSATILE SYSTEM

Two diffferent options allow the surgeons to select the one that will best suit their patient's needs.

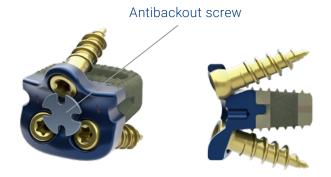

RIGID FIXATION

- Locking Screw & Threaded Plate for a secure rigid fixation of the construct
- One step screw lock system
- Intrinsic Antibackout system

"VARIABLE" FIXATION

- Lag Screw & Unthreaded Plate to allow micromotion and proper load distribution according to the Wolff's law^[2]
- **Physiological-like support** that may lead to a stable configuration
- Easy insertion of the central **Antibackout screw** to safely fix the Lag screw

COMPREHENSIVE SYSTEM TO COVER DIFFERENT PATIENTS' NEEDS

Footprint [WxD]

16x14 mm 18x15 mm

Height [mm]

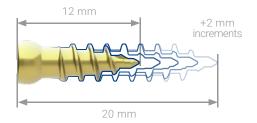

5mm - 12 mm (+1mm increments)

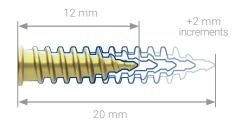

Lordosis

SCREWS

Self-Tapping & Self-Drilling screws are avaiable both for Locking and Lag screws.

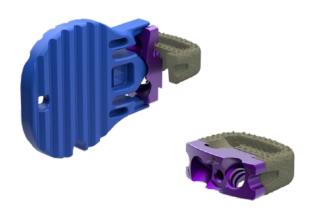

Mecta-C[®] STAND ALONE

MODULAR DESIGN OFFERS FREEDOM OF CHOICE

Universal cage to plate «snap-in» concept allows 1-click construct assembly:

- Easy intraoperative assembly through the dedicated instrumentation
- Create an indication-specific interbody fusion device
- One cage fits in four plate configurations

MULTIPLE CONFIGURATIONS

Reduces the risk of impingement with

surronding anatomical structures.

Best fit design for C7-T1 or C2-C3.

QUATTRO

TRIO

Offers improved Stability and Torsional **Resistance**. The convergent/divergent screw trajectory minimize the adjecent level interference in multilevel fixation.
