Sysbupro

Low-code Platform

A Powerful Platform For Your Business

Enhance customer experience, fuel innovation, reduce costs, increase efficiency and achieve significantly faster development cycles with less coding. Use the Sysbupro Low-code Platform to automate your business process by quickly building an application that meets your needs.

WHAT IS LOW-CODE

Low-code platform is a set of tools that are used to create applications with a visual drag-and-drop interface rather than writing complex code. Using a low-code development platform offers businesses the best opportunity to be agile and cost-effective in an ever more competitive environment. There aren't enough coders to meet the growing demand for apps and services. Taking advantage of a low-code development platform will allow any company to create not only apps, but also streamline their business processes.

KEY BENEFITS OF USING SYSBUPRO

REDUCED DEPENDENCE ON DEVELOPERS

Build apps quickly using existing staff - Business or IT. A simple interface allows many apps to be built *without any coding*, just use drag & drop elements and options switches.

Application design can start *by creating your desired workflow in Sysbupro*, which then can turn into designing actual screens, reports and other types of workflow actions.

Some coding may still be needed for more complex apps, but less often.

DECREASED COSTS

Reduce outsourcing costs, or the costs of hiring more specialized application development staff.

IMPROVED PRODUCTIVITY

Free your IT team to focus on other mission-critical tasks - business users can build some or all parts of apps and IT involvement needs less specialized skills.

Build applications 10 times faster than it typically takes using traditional development tools.

Speed is critical! Use our pre-tested components & templates to hugely reduce testing effort.

DIGITAL TRANSFORMATION

Become more successful by transforming your paper-based and manual processes into mobile and web applications in order to be more agile, efficient and have databased insights.

PLATFORM FEATURES

INTUITIVE APPLICATION BUILDER

• Using drag-and-drop functionality, create unique screens of any complexity.
• Use wide range of provided components to build beautiful interfaces.
• Design user menus in a minute.
• Get lightning fast UX with well-tuned system infrastructure.
• You don't need to be a developer to automate your processes with Sysbupro. Just use our intuitive visual tools to build your application.

JUST IN TIME CAPABILITIES

• With Sysbupro, you immediately see the application you are building.
• Its JIT (Just In Time) capabilities allows making changes and address issues on the fly.

1

CREATE ALL
THAT YOU ENVISION!

PLATFORM FEATURES

ENTITY DESIGNER
• Create app entities and relations between them without any coding
• Define multiple constraints at the field level.
• Use predefined Create/Read/Update/Delete APIs to start managing information for your entity right after schema is saved.
• For limitless customized APIs and validations, use Java language to build your unique back-end.

BUSINESS PROCESS MANAGEMENT
• From each stage of the workflow, parts of the application can be built or connected-in and it will follow the rules you define in the workflow.
• Orchestrate data and processes using business processes.
• Design processes using visual designer.
• Connect your processes with external systems.
• Assign tasks dynamically to specific users, groups of users or defined roles so that the right person is notified and takes actions.
• Make use of Decision Management utility to create custom resolutions for different steps without coding.

DOCUMENT & IMAGE MANAGMENT
• Define type of files that will be used in the system.
• Upload the files into the system linking them to specific entity.
• Download and view the files on request.
• View images directly in your application.

INTEGRATION WITH EXISTING INFRASTRUCTURE
• Integrate Sysbupro with existing resources, or migrate data from your legacy system to the new app built on our platform.
• Use Takeover module to load information from Excel, Delimited or Fixed file format.
• Use predefined and customized APIs to load/manage data in Sysbupro from any third party application.

DEPLOYMENT OPTIONS
• Sysbupro can be installed on Sysbupro's Cloud, Public Cloud or on-premises.

REPORT DESIGNER
• Our built-in report designer allows the design of reports of any complexity.
• Switch from Report-type presentation to Chart-type, to create stunning dashboards.
• Get real-time reports with drill-down capabilities.
• Make use of pivot table functionality to add more power to your reporting.

USER MANAGMENT
• Define user roles with access to system APIs, home screen and menu.
• Manage users, assigning roles, session time-out duration, password change frequency and more.

SCHEDULED JOBS
• Schedule jobs to run on the backend at a specific date and time.
• Invoke Asynchronous or Synchronous APIs or specifically designed code.

SURVEY & SCORING
• Easily create a survey and embed it in your app.
• Set different score and weight for questions and answers for scored surveys.
• You can see the score per each questions and/or for the whole survey.

BUILT-IN CHAT
• Give your teams' simple and clever way to communicate inside your company.
• Create, close, update a chat room from anywhere in the system.
• Simplify the whole process unifying involved persons' decisions or messages into a single place.

ACCESIBLE ON MOBILE DEVICE
• Everything that is built on the web application immediately can be seen on mobile devices.

CALENDAR
• Use calendar to define weekdays, holidays, financial end of month to control your operations or reporting and notifications.

PRODUCTS CREATED ON SYSBUPRO

Whichever industry you are in, the **Sysbupro low-code platform** has got you covered.

Sysbupro can be used in all types of industries because it has built-in the necessary components to digitize any type of business, from small to big.

The benefits that digitalization can bring to a business are a life-changing experience for owners, managers and all employees.

Having the ability to create your own application tailored for your company, is crucial for a successful business in a competitive environment.

You can easily manage all major processes, and bring all employee and client activity under one roof, monitor company profitability and forecast business growth.

Sysbupro has been successfully used in designing applications for the Financial and Construction sector.

Below are a couple of products that have been built on Sysbupro.

RECONWIZZ

Reconwizz is a reconciliation application developed in partnership with AdVision Finance in the Netherlands. It allows linking unlimited sources of data in one application. It can run scheduled tasks, reports, and automatic matching rules to simplify financial institutions' reconciliation process. This app is intended to be used for all industries that require data reconciliation.

Visit website for more information

TESTIMONIAL

"We worked with Reconwizz team to implement the solution at our partner bank in Malawi. Reconwizz made it possible to greatly improve the efficiency of the reconciliation process and give more insights in the accounts used by our digital channels. Reconwizz also helped a lot in the way of thinking about our processes; while implementing in the application we have made several important changes in our front and back office processes that improved the operational efficiency of our customer services as well."

RALPH MEELHUYSEM,
PRODUCT MANAGER PAYMENTS,
RABOBANK, THE NETHERLANDS

BUSINESS INTELLIGENCE

Business Intelligence was designed to simplify reporting and decision making for financial institutions and all types of industries.

It has the capabilities to provide historical, current, and predictive views of business operations.

Having a visual and user-friendly web interface, it allows all types of users to design all necessary elements of a BI application.

SYSBUPRO IN CONSTRUCTION

A construction company specialized in water and sewerage networks from Moldova has been using Sysbupro to organize their daily business processes into the smallest details, measure efficiency of all employees, identify projects risks and profitability, manage huge warehouse and all activities in construction.

TESTIMONIAL

"We have been working with Sysbupro team and are profoundly thankful for the results the Sysbupro Platform has brought to our construction company. We are pleased to have the ability to create our own reports and see instantly all the costs on transportation, equipment, profitability of projects and employees. We have managed to organize our huge warehouse in very simple ways. Sysbupro has really made our working life much easier and we highly recommend this platform."

GNACIUC DUMITRU,
MANAGER AT CES COMUNICATIONS
MOLDOVA

CORE BANKING SYSTEM DASHBOARD

Sysbupro is used by RJB Systems, a Core Banking System support business, as a Business Intelligence system, providing comprehensive dashboard-style charts to their clients visualizing key indicators of the services they provide, and system performance.

TESTIMONIAL

"With Sysbupro we turn 'dull' KPIs from an existing daily process report into beautiful charts showing trends over time. Our clients love the new visuals and we can see where proactive actions are needed. Building the site ourselves was easy - we are excited to think how Sysbupro can help us elsewhere in our business."

ANDREW BEALE,
HEAD OF PROJECTS AT RJB SYSTEMS,
LONDON, UK

**CREATE ALL
THAT YOU ENVISION!**

OUR PROFESSIONAL TEAM WITH TALENT AND PASSION FOR THE WORK WE DO

We have business and technical experts who have over 27 years of development & implementation experience in process automation technologies. Having an experienced team with in-depth understanding of clients' needs, we strive to deliver the most efficient products. Offering correct solutions is what we enjoy doing. Nothing can function without a deep understanding of the problems and obstacles a company is facing.

Sysbupro incorporates many years of effort - developing, testing, and crucially, incorporating feedback from customers.

We feel we have created a wonderfully powerful tool, that is genuinely enjoyable to use, and which will help make your business more efficient.

"The idea for Sysbupro was born from many years of developing successful solutions for international financial institutions, using more traditional development environments.
In that time, I not only learnt the challenges and necessities that most institutions have in common, I also realized the need for a low-code platform like Sysbupro, to allow next-level delivery of value to our clients.
We created Sysbupro initially to help those financial institutions more efficiently digitize their workflows, but quickly realized it's applicability to any industry at all."

Valeriu Tonu
Architect of Sysbupro
