INSTRUMENT UPDATE

acetabular cup extraction system

ultra hard titanium nitride coating for extended blade life

EXTENDED BLADE LIFE leads to long term savings

System Rental Available on a single procedure basis

Rental Details

Rental is available in several configurations:

- · 4 cases with all sizes, including 2 sets of heads
- · 3 cases, including 2 sets of heads
- · 2 cases, including 2 sets of heads
- · 1 case, including 2 sets of heads
- 1 size (starter & finish), including 2 sets of heads Each case includes 5 Starter and 5 Finish Instruments

Rental Charges

In addition to a rental fee, there is a charge for each instrument used (not heads). Also, an additional charge applies if the used instruments are kept instead of returned. *Rental is for one surgical procedure only, and must be returned within 5 days following the procedure.*

Blade Discount Program

For used CupX blade instruments we offer a blade discount program. Please see our website or call for details.

acetabular cup extraction system

Non-modular blade system

Helps to decrease costs while increasing surgical efficiency as blades don't need to be changed interoperatively.

Handle Placement

Near the end of the shaft allows for better leverage and easier rotation.

Impaction Platform

Strike with a mallet to help drive in the blade.

Handle Styles Two to choose from... Fixed Handle

Wrench Drive Handle

acetabular cup with minimal loss of bone

Stainless Steel Heads

In standard diameters of 22, 26, 28, 32 and 36 mm (38 mm optional).

Fixed Blades in Two Lengths Blade Diameters from 42mm-80mm

Can typically be used for multiple procedures, then replaced through our Blade Discount Program.

Benefits of Our Titanium Nitride Coated Blades

- **Extends Blade Life**...by increasing surface hardness
- **Prolongs Sharpness**...with an ultra hard, heat resistant coating
- More Wear Resistant...due to high lubricity of titanium nitride coating
- **Prevents Galling**...won't chip, peel, or flake
- Reduces Friction...eliminates seizing in metal-on-metal contact
- Chemical and Corrosion Resistant
- Non-toxic...medically approved and proven

Extended blade life leads to long term savings

Optional Large Delrin Heads*

Designed to provide tight, secure surface contact when removing larger size acetabular cups, and can also be used if the cup liner of a standard size cup is worn and must be removed. Available in diameters from 39 to 60mm in 1mm increments.

*US Patent #7,998,146 B2

Optional Wrench Drive Handles

Works like a socket wrench, allowing improved torque without changing positions.

Shaft Alignment

The shaft is aligned directly over the head, which helps prevent the head from riding out of the cup while keeping the instrument properly centered. With proper centering, the curvature of the blades will more closely match the hemisphericallyshaped outer surface of the acetabular cup when rotating, thus minimizing bone loss and creating a relatively intact acetabular recess for fitting of a new cup.

Before use, find and remove any screws and clear away any soft tissue to ensure no interference with the blade.

Note: If the cup liner is damaged or offset, proper centering of the shaft may not be possible—remove the liner and install a temporary insert, or utilize one of our larger Delrin Heads if available.

1

Determine & Select Blade and Head Sizes

Measure the outside (blade) and inside (head) diameters of the cup to be removed. If the diameters don't correlate exactly with the set sizes, select the next **largest** blade size and the next **smallest** head size.

2

Install Head Onto Shaft End

Install the selected spherical Head onto the chosen Shaft with the Starter (short) Blade, which will be used first.

Cup acetabular cup extraction system

3

Begin Cup Removal

The shorter, stiffer Starter Blade is used around the top rim of the cup for more dense bone. The Head is seated into the acetabular cup liner, and a mallet may be used to strike the impaction platform on the end of the shaft to help drive in the blade. If extreme resistance is encountered due to highly sclerotic bone, the instrument may be removed and a straight or curved osteotome may be used to help.

Finish Cup Removal

Remove the Head from the Starter Blade shaft and install it on the Finish (long) Blade shaft. The longer, thinner Finish Blade is used for deeper cutting around the dome of the cup. Repeat the method described for the Starter Blade. Be careful not to apply too much force using the thin blade.
