Test Report

Batch test report for LMC-56 Document: #23886/83032

Device serial number:	010221-2204-0006 ÷ 0015, Total: (10)
Testing date:	02.05.2022
Test conditions:	Temperature 23 °C, Relative Humidity 34 %

Testing equipment and accessories:	
Multimeter 6200 Nr. 9761042.	Certificate of calibration Nr. E0011K22
Multimeter 6200 Nr. RO1903024.	Certificate of calibration Nr. E0010K22
Multimeter 6200-2 Nr. ROB5010002.	Certificate of calibration Nr. ROB5010002
Tachometer BIOSAN T-2 Nr. 120906.	Certificate of calibration Nr. E0054KD20
Tachometer BIOSAN T-3 Nr. 12482.	Certificate of calibration Nr. E0055KD20
Tachometer PeakTech 2790 Nr. 151122102.	Certificate of calibration Nr. E0314KD21
Timer ARG010 Nr. 15851.	Certificate of calibration Nr. 786566
Test Procedure:	

Test	results		
#	Indicators	Result	Tolerance
1	Visual appearance	PASS	Without any visible defects
2	Button performance	PASS	Each button works as intended
3	Alarm signal	PASS	Works, stable
4	Lock check	PASS	The lid is closed tightly, and the device does not work with the lid open
5	Opening lock using key	PASS	Check if possible, to open device lid using key in emergency
6	Disbalance performance check	PASS	In case of disbalance rotation automatically stops
7	Time to achive maximal rotation speed with acceleration mode (F)	PASS	≤ 20 sec
8	Time to fully stop rotation with stop mode (F)	PASS	≤ 35 sec
9	Device performance with load	PASS	No external noise and defects after a

			performance
10	Rotation speed 100 rpm	PASS	100 ± 10 rpm
11	Rotation speed 4200 rpm	PASS	4200 ± 20 rpm
12	Rotation speed 6000 rpm	PASS	6000 ± 30rpm
13	Rotor identification speed	PASS	≤ 5 sec
14	heck rotor identification	PASS	Same as stated in methodology, standard - BR-4U (50ml 4200), R-24/10i (4000) - 1 min
15	Sound level check R-6i (4200)	PASS	≤ 72 dB
16	Insulation resistance	PASS	≥ 2 MOhm
17	Ground resistance	PASS	≤ 0.1 Ohm

Tested by: engineer of quality control department	A. Dubrovskis
Conclusion:	Unit meets the indicated specifications and is considered to be fit for operation.

Results of test apply only to the batch devices, with which this test was done. This report may be copied only in full form and with written permission from Biosan SIA

OLO Zita Balachovičienė

Uncertainty: The expanded uncertainty is based on a standart uncertainty multiplied by a coveradge factor of k=2, which provides a confidence level of approximately 95%. The standart uncertainty has been determined in accordance with EA-4/02

LIUDHIM

Neapibrėžtis. Išplėstinė neapibrėžtis apskaičiuota suminę standartinę neapibrėžtį padauginus iš koeficiento k=2, kuri, esant normaliniam skirstiniui, atitinka 95% pasikliautinumo lygmenį. Standartinė neapibrėžtis apskaičiuota pagal EA-4/02.

4000	3999.5	-0.50	± 2.31	± 0.06

Uzrādītā paplašinātā nenoteiktība ir mērījumu standartnenoteiktība, kas reizināta ar pārklāšanās koeficentu k=2, kura pie normālsadalījuma atbilst apmēram 95 % pārklāšanās varbūtībai. Mērījuma standartnenoteiktība noteikta saskaņā ar dokumentu EA-4/02 M:2013.

The expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k=2, which for a normal distribution corresponds to a coverage probability of approximation 95%. The Standard uncertainty of measurement has been determined in accordance with Publication EA-4/02 M:2013.

Fluke Corporation Instrument Test Certificate and Statement of Calibration Practices

The Fluke Corporation, ISO Certification No. U0018, hereby certifies that your product was calibrated in accordance with applicable Fluke calibration procedures during the manufacturing process. These processes are ISO-9001 controlled and are designed to assure that the instrument will meet its published specification.

The Fluke Corporation further certifies that the measurement standards and instruments used during the calibration of this meter are traceable to the United States National Institute of Standards and Technology (NIST). At planned intervals, Fluke's measurement standards are calibrated by comparison to or measurement against the standards of NIST.

Fluke guarantees that at the time of test your instrument met its published specifications. Detailed specifications are available in the User Manual and Specification Supplement. A certificate of traceability can be obtained by sending the meter to any Fluke Technical Service Center. A nominal fee is charged for this service.

Quality Assurance Manager

For Customer use only:

Because we use different delivery channels, you may have received a meter with a test certificate that is several weeks old. Our experience indicates the calibration of this product is not affected by storage prior to its initial receipt by the customer. Therefore, the recalibration of this unit should be based on when the product is put into service, plus the recommended calibration interval.

The recommended calibration interval for this instrument is 12 months and begins on the date of receipt by the customer For recalibration, please use our calibration services. Locations are listed at the WWW address below.

Please fill in appropriate dates as indicated:

	18 Ω	17.97Ω	$\pm~0.35~\Omega$

Uzrādītā mērījuma paplašināta nenoteiktība ir noteikta kā mērījumu standartnenoteiktība, kas pareizināta ar pārklāšanās koeficentu k = 2.00, kura pie normālsadalījuma atbilst apmēram 95% pārklāšanās varbūtībai. Mērījuma standartnenoteiktība noteikta saskaņā ar dokumentu EA-4/02-M:2013.

The expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor k = 2.00, which for a normal distribution corresponds to a coverage probability of approximation 95%. The Standard uncertainty of measurement has been determined in accordance with Publication EA-4/02-M:2013.
