- UMI.CMS
- Drupal
- NetCat

Machine Learning

Machine learning is a method of data analysis that automates analytical model building. It is a branch of artificial intelligence based on the idea that systems can learn from data, identify patterns and make decisions with minimal human intervention.

Artificial Inteligence

Artificial intelligence (AI) is the simulation of human intelligence processes by machines, especially computer systems. These processes include learning (the acquisition of information and rules for using the information), reasoning (using rules to reach approximate or definite conclusions) and self correction. Particular applications of AI include expert systems, speech recognition and machine vision.

Could be used in:

- Increasing sales
- Improve with customer experience
- Automated processes
- Fraud detection

- Chat bot
- Automated logistics
- Early diagnostics
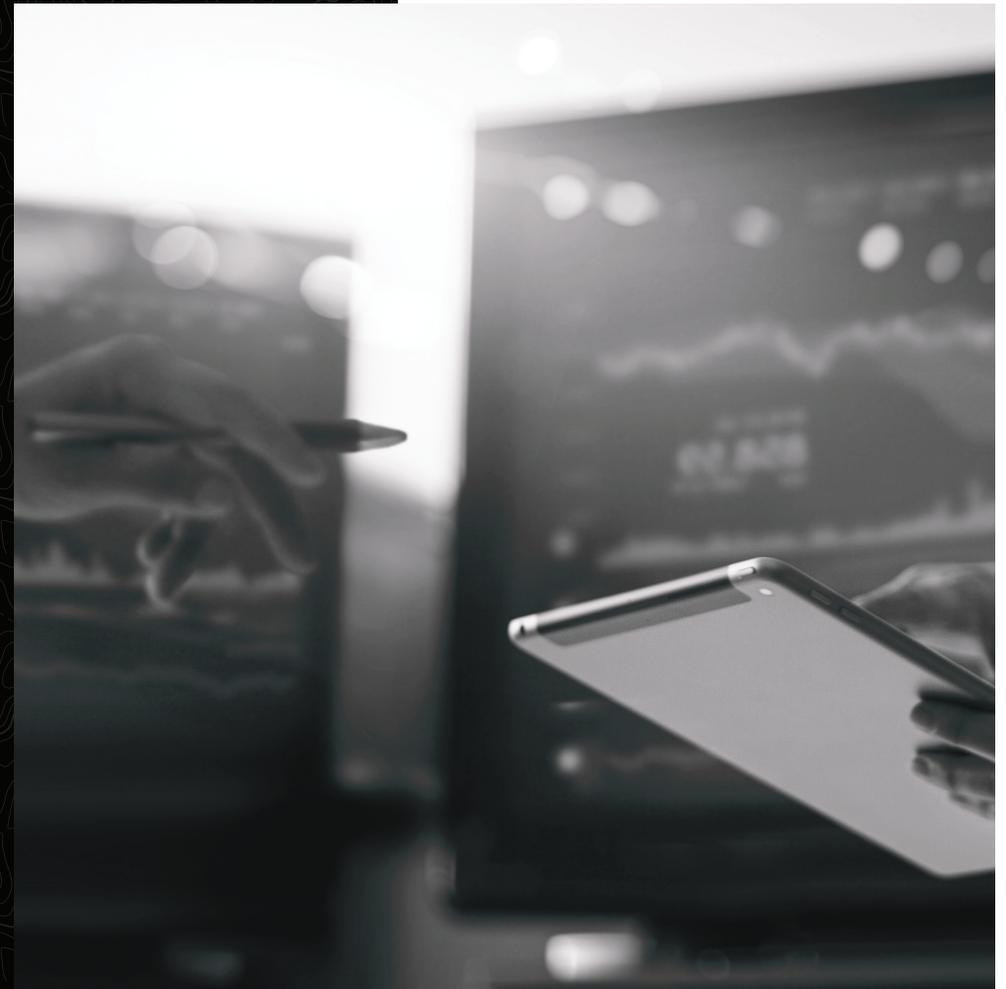

3. Our Team

Our multinational team is made from
High skilled proffesionals in certain fields.

Development:
