

Working area is provided with sink for hot and cold water and small sink for waste formalin. This formalin is accumulated in container below, which is placed in small cabinet.	 The diagram shows a laboratory sink area with three distinct basins. On the left is a small rectangular basin labeled 'Formalin waste sink'. In the center is a larger rectangular basin labeled 'Water sink' with a curved faucet. To the right of the water sink is a small circular basin labeled 'Formalin dispenser'.
Working area is provided with fixed metal scale for quick size measurement.	 The diagram shows a long, thin, fixed metal scale with markings in centimeters, used for quick size measurement.
Water mixer combined with hand shower, with option of proximity water mixer. Simply activate the water faucet by the lever. Now you can activate the hand shower by pressing the button on the shower handle.	 The diagram shows a water mixer faucet with a hand shower attachment. The hand shower has a button on its handle, which can be pressed to activate the water flow.
Grinder	Please see attached user manual for Grinder.

Air filters

The PP stations can be fitted with 2 options of vapour filters. External filter box, or internal charcoal cartridges.
