

For Humeca D80

- 80mm cutting width of the D80 dermatome allows for a uniform and even cutting surface even when used over difficult uneven surfaces.
- Ideal for split thickness skin grafts taken from the scalp
- 80mm STSG are ideal for the Humeca and Zimmer skin graft boards (dermacarriers)
- Cordless, battery operated and lightweight design offers optimum manoeuvrability and mobility
- Precise thickness of the graft from 0.0 to 1.2 mm (0.000 – 0.048”) in 0.1 mm (0.004”) increments
- The use of width-reducing clamps on the dermatome head allow cutting of smaller graft widths
- Battery and motor of the instrument are not sterilized, thus guaranteeing optimum durability
- Thickness adjustment can be fixed to prevent accidental change of graft thickness during cutting
- Safe and quick blade replacement
