LEM Plus

Ceiling suspended tubestand

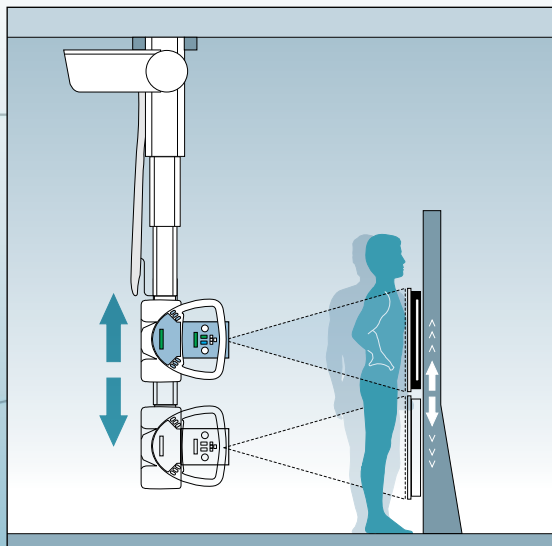

LEM Plus

Thanks to its versatility and wide choice of configurations, LEM Plus is the ideal ceiling suspended tubestand for all types of radiology departments. Its advanced design guarantees a high level of structural rigidity and sturdiness, together with reduced dimensions. The wide vertical and lateral run span allows a highly effective use of the examination room space. When coupled to bucky tables, chest stands, or simple trolleys, excellent and immediate radiographic results can be obtained thanks to ease and accurate positioning. Designed for high level performance, LEM Plus can reach every corner of the examination room. Thanks to the telescopic column with high rigidity and the spring counterbalanced vertical movement, LEM Plus ensures a rapid, effortless and precise positioning of tube head, made even easier via an intuitive colour coding system for the movements. Upon request, the movement can also be equipped with a motorised servo-mechanism.

All movements can be blocked in any given position by means of electromagnetic brakes and position indicators every 90° help align the tube to the most frequently used accessories.

Compared to the version previously available, the new generation of LEM Plus is now offering:

- new ceiling rails, featuring higher rigidity despite the lower weight
- permanent brakes on all movements
- new keyboard with enlarged handgrip integrating the command to unlock the movements. It provides an excellent manoeuvrability and instant access to all pushbuttons.

The Autotracking Option

can assure the automatic vertical alignment between the tube and the detector. When equipped with this feature, LEM Plus further increases the ease and accuracy of positioning, speeding up the operator's workflow.

LEM Plus can be typically coupled with a bucky table.

Coupled with remote control tables, LEM Plus allows to execute lateral projections.

Another typical configuration of LEM Plus is in association with a Chest Stand.
