1. Overviews

1.1. Purpose

This document is written according to the document PS 3.2 of the DICOM Standard and used to check connectivity with other devices that use this standard. The software acts as:

- Query/Retrieve: SCU
- Storage: SCU y SCP
- Verification: SCU y SCP
- Dicom Print: SCU

1.2. Scope

Alma WORKSTATION is an application to display DICOM images and Structured Reports obtained over the network from interchange media, or from files loaded from the local file system.

The application supports querying to remote systems for a list of DICOM objects that may then be retrieved to the local system. It also supports sending locally loaded images across the network to another system.

All storage SOP Classes can be received, stored and transmitted by the application, but not all can be displayed in this application as we define in the next Table:

2. Network

2.1. Implementation model

The application Alma WORKSTATION provides user interface, internal database and network listener that handle the incoming connections.

The implemented services are the following:

- Echo-SCU: Asks for verification to the remote server
- Find-SCU: Queries list of studies and series
- Move-SCU: Request to receive studies

- Storage-SCU: Sends images and other composite instances
- Echo-SCP: Responds to verification requests
- Storage-SCP: Receives incoming images and other composite instances.

All SCP activities are performed asynchronously in the background and not dependent on any sequencing.

All SCU activities are sequentially initiated in the user interface, and another activity may not be initiated until the prior activity has completed.

3.6.2. Association Policies

3.6.2.1. General

STORE_SCU allows only one operation per Association. No asynchronous operation window negotiation is performed.

Maximum PDU size received	131072
---------------------------	--------

3.6.2.2. Number of Associations

Maximum Number of simultaneous associations	5
---	---

3.6.2.3. Asynchronous Nature

STORE_SCP allows only one operation per Association. No asynchronous operation window negotiation is performed.

3.6.2.4. Implementation Identifying Information

Implementation Class UID	Implementation Version Name
1.2.826.0.1.3680043.2.403.1.40.1.2.0.18418	RAIMDicom_1.2

3.6.2.5. Association Initiation Policy

This Application Entity initiates no association.

3.6.2.6. Association Acceptance Policy

When STORAGE_SCP accepts an association, it responds to storage requests.

3.6.2.7. Activity – Receive Storage Request

3.6.2.8. Description and Sequencing of Activities

As instances are received they are copied to the local file system and a record inserted into the local database. If the received instance is a duplicate of a previously received instance, it is discarded.

3.6.2.9. Accepted Presentation Contexts

3.7. PRINT-SCU

3.7.1. SOP Classes

PRINT-SCU provides the *Conformance* with the following SOP Class(es):

SOP Classes Name	Sop Class UID	SCU	SCP
Verification SOP Class	1.2.840.10008.1.1	Yes	No
Basic Grayscale Print Management Meta SOP Class	1.2.840.10008.5.1.1.9	Yes	No

3.7.2. Association Policies

3.7.2.1. General

PRINT-SCU initiates but never accepts associations

Maximum PDU size received	131072
---------------------------	--------

3.7.2.2. Number of Associations

Maximum Number of simultaneous associations (initiated)	Unlimited
---	-----------

3.7.2.3. Asynchronous Nature

Application does not support asynchronous communication (multiple outstanding transactions over a single Association).

Maximum number of outstanding asynchronous transactions	1
---	---

3.7.2.4. Implementation Identifying Association

Implementation Class UID	Implementation Version Name
1.2.826.0.1.3680043.2.403.1.40.1.2.0.18418	RAIMDicom_1.2

3.7.3. Association Initiation Policy

PRINT-SCU attempts to initiate a new association when user performs the query action from the user interface.

3.7.4. Activity – Send DICOM Print Request to Remote AE

3.7.4.1. Description and Sequencing of Activities

For each instance to be transferred, a single attempt will be made to transmit it to the selected remote AE. If the send fails, for whatever reason, no retry will be performed, and an attempt will be made to send the next instance

3.7.4.2. Proposed Presentation Contexts

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation

3.8. Media Storage AE

The standard specifies only CD-R, but Alma WORKSTATION can export/import studies from any storage media, as HD, CD-R, DVD-R, etc.

3.8.1. Create

Alma WORKSTATION allows export in different storage media to allow other systems to access data. Alma WORKSTATION has implemented File-Set Creator that allows creating a multiple index and save the selected studies.

3.8.1.1. Activity: Save studies with DICOMDIR

The software will create a DICOMDIR file to allow other systems a fast access to the stored data.

3.8.1.2. DICOMDIR Tree

The export will be in the next folder tree:

File	Folder	Patient Folder	Study Folder	Series Folder	Image File
.\ DICOMDIR					
.\	FileSet\	<patientId_1>\	0\	0\	0
.\	1
.\
.\	1\	2
.\	1\	3
.\
.\	1\	0\	4
.\	0\	5
.\
.\	...	<patientId_2>	0\	0\	6
...

3.8.2. Read

Alma WORKSTATION allows import information and data from stored data acting as a File-Set Reader and storing the information in the software.

3.8.2.1. Activity: Import studies with DICOMDIR

Alma WORKSTATION scans the folder or media storage looking for a DICOMDIR file that allows to know all the information saved in the media. The user can import the information to the system.

4. Configuration

4.1. AE Title / Presentation Address Mapping

To ensure unique identification within the network the hostname should be used as part of the AE Titles. This string can be up to 16 characters long and must not contain any extended characters as DICOM Standard specify in 3.5.

4.2. DICOM Verification

The Verification Services uses the AE configuration of the DICOM Service that is checked with C-ECHO message. So other systems could check the software with an C-ECHO message, as the software can verify other systems with the same system.

4.3. DICOM Storage AE Title

The DICOM Storage application provides the application entity title with fixed name but configurable by number. If port cannot be open at start, the software will notify user that retrieve option will be disabled. Firewalls or other software should allow software to wait for connections.

4.4. DICOM Query/Retrieve AE Title

The DICOM Query/Retrieve application uses the same application entity title as the DICOM Storage AE. Firewalls or other software should allow software to establish connections.

4.5. DICOM Transfer syntaxes

The DICOM Transfer syntaxes supported by software can be configured in xml file.

4.6. Grayscale Standard Display Function

The software provides some methods to modify the Grayscale Standard Display Function as it's specified in the DICOM PS 3.14. A photometer is required to measure luminance from a set of files and introducing them to the software a new Grayscale Standard Display Function will be loaded.
