WITH THE CENTRAL FOCUS ON
PATIENTS' SAFETY AND USERS' COMFORT

NE'X Glue[®] Surgical Adhesive

NE'X Glue[®] is two component surgical adhesive which covalently bonds with tissue and takes a form of flexible hydrogel. It also mechanically binds with synthetic materials. Such features allow for strong tissue - tissue or tissue - synthetic material connections.

Combination of Bovine Serum Albumin (BSA) and glutaraldehyde in optimal ratio with precise mixing inside the applicator of the delivery device allows for full consumption of glutaraldehyde during the polymerisation. As a result, absolutely biocompatible flexible hydrogel is created.

KEY FEATURES:

- Variety of available volumes – 2, 5 and 10 ml
- Standard and spreader applicator tips
- Room temperature storage
- Ready for use in seconds
- Easy to use
- Full polymerization in 20-30 seconds
- Full strength in 2 minutes
- Works independently of the coagulopathic state of the patient
- Stronger than sealants based on fibrin or polyethylene glycols

CLINICAL APPLICATIONS:

NE'X Glue® is used as an adjunct to standard methods of repair such as sutures, staples, electrocautery and patches to seal, bond and reinforce tissue. Can be applied alone to fix surgical meshes, reinforce, repair or seal damaged parenchyma as a replacement of ineffective or impractical techniques.
