Protector I

Reference: 410220

This alternating air mattress overlay has 130 bubble cells that alternately inflate and deflate to prevent bedsores. The pad includes end flaps that can be tucked under the mattress. The air pressure is generated by a pump and can be adjusted to increase or decrease the mattress firmness for patient comfort. The pump provides quiet and energy-efficient performance and can be hung on the bed. Ideal to prevent stage I bedsores. For patients up to 110kg. Spare repair kit included.

- Low to medium risk level.
