## OVERVIEW

Maximized exposure. Optimized protection. Superior strength.<sup>1</sup>

With SurgiSleeve™ wound protectors, you get the maximum field of vision with the added protection and strength so you can focus more on the patient, without having to worry about the performance of your protector.

The portfolio of SurgiSleeve™ wound protectors:

- Are intuitive and easy to use
- Are superior in film strength<sup>1</sup>
- Provide maximum exposure during procedures
- Are economically efficient
- Provide the choice you need for the procedure at hand

## FEATURES

### TWO BENEFITS, ONE SOLUTION

- Circumferential elastic retraction maximizes the working area for better exposure and visualization
- Additional exposure is achievable with the addition of the retraction ring

Optimal wound protection and superior strength

- Protects wounds at the incision site with 3x stronger film material than Alexis™\* wound protector/retractor, with the same material thickness<sup>1</sup>
- Keeps incision moist and protects against contamination

Easy to roll down & fast to use

- The proximal blue ring is not only easier to roll down compared to Alexis™\* O, but can also be rolled down by just one person<sup>2</sup>
- The flexible distal grey ring is inserted through the incision in seconds and easily removed at the end of a procedure
- Faster and easier to use overall compared to Alexis™\* O<sup>2</sup>

Retraction ring for increased wound exposure

- Large and extra large sizes are available with a retraction ring
- The SurgiSleeve™ wound protector with retraction ring provides greater retraction and visibility vs. standard wound protectors<sup>3</sup>
- Provides equivalent exposure compared to Alexis™\* O<sup>3</sup>

Cost and standardization

- Save an average of 25% when switching from Alexis™\* wound protector<sup>4</sup>
- Reduce SKUs from 15 to 5 which can help reduce inventories
- Hassle-free conversion process

Order Information >

1. Comparison of mean film material strengths between SurgiSleeve™ wound protector and Alexis™\* wound protector as part of a February 9, 2012 Puncture Resistance Material Evaluation (Report # 2151-002; report on file). Statistically significant results p=0.004.

2. VOC:Survey of 29 General and OB/GYN surgeons of SurgiSleeve™ Wound Protector and Alexis®\* O Large and Extra Large conducted during a product demonstration event October 28-29, 2014 in San Francisco, CA.Equivalence Testing, October 30, 2014; Report #2151-021; SurgiSleeve™ Extra Large Wound Protector With Retraction Ring Equivalence Testing, November 4, 2014; Report #2151-023; VOC:Survey of 29 General and OB/GYN surgeons of SurgiSleeve™ Wound Protector and Alexis®\* O conducted during a product demonstration event October 28-29, 2014 in San Francisco, CA.

3. For the Large and Extra Large sizes; SurgiSleeve™ Large Wound Protector With and Without Retraction Ring Incision Retraction Comparison, October 14, 2014; Report #2151-020; SurgiSleeve™ Extra Large Wound Protector With and Without Retraction Ring Incision Retraction Comparison, November 4, 2014; Report #2151-022.
