

Communication device with embedded eye control camera

Independence & flexibility

Access all the functions of a Windows computer, including small and large screens, both indoors and out, completely independently.

Replace a traditional keyboard and mouse with your eyes and surf the web, connect on social media, play games, create documents and more. Simply connect the camera to your Windows device via USB, and access everything your computer has to offer, intuitively and independently with Eye Tracker Control software

What's in the box?

- Tablet Device 13" with touch screen
- Eye tracker camera
- Bracket that holds together the Tablet Device and the Eye Tracker
