

We confirm that the equipment we offer meets the following requirements:

- 1) not less than 40 pcs of 500 ml bags per load
- 2) reaching the solidification state in the center of the plasma bag for a maximum of 45 minutes at a temperature of minus  $30\text{ }^{\circ}\text{C} \pm 1\text{ }^{\circ}\text{C}$ ;
- 3) Defrosting - automatic.
- 4) Temperature monitoring controlled by a microprocessor with large LCD display, located on the control panel, easy to program with indication of freezing temperature;
- 5) Monitoring the freezing time by signaling at least one of the parameters - visual or auditory;
- 6) Adjustable legs;
- 7) RS232 interface or other type of data transmission / storage port;
- 8) External surfaces made of stainless steel resistant to the action of biocidal substances used for sanitary processing
