

SEALER WITHIN A SEALER

The Enviro ASP System is a proprietary process utilizing a patented low-viscosity, silicone-modified asphalt sealer that eliminates water-associated problems, such as repeated freeze/thaw cycles, and damage caused by exposure to UV light.

Benefits of the Enviro ASP System

- Permanent joint-free repair in 30 minutes or less
- Recycles all existing materials in place
- Suitable for all modern asphalt surfaces
- Applicable in any outside temperature
- Effective with all surface defects
- Reduces CO₂ emissions
- More cost effective than traditional methods
- No saws or jackhammers required
- Quiet process allows for off-peak repairs
- Guarantee available

This permanent and sustainable process recycles all existing asphalt material resulting in a joint-free repair that does not spoil the look of the original surface. The system is ideal for 1 to 4 inch depth surface repairs created by joint and trench failures, inlet and manhole covers, potholes and wheel surface rutting. The Enviro ASP System leads the way in infrared asphalt repair technology. The ASP Rejuvenator/Sealer is a patented asphalt/silicone based technology that when properly applied, outperforms all others on the market.

The **Enviro ASP System** is the complete road repair process, and now is available to local and state authorities and their contractors who realize the benefits of using it successfully.

The **Enviro ASP System** uses an infrared heater (Enviro Patcher), asphalt patch, and ASP Rejuvenator and Sealer. It recycles all material in the patch, eliminates jackhammer use, is quiet and convenient to use and results in a permanent guaranteed joint-free repair.

The **Enviro ASP System** is significantly more cost effective than traditional methods of road repair with no removal, sawing, jackhammering, or dumping cost. Additional advantages are a minimal purchase of repair material, no hot asphalt deliveries, reduced workman comp claims, and no costly return trips to previous repairs. The use of the ASP Sealer and Preservative and the elimination of all surface defects deliver a permanent reinstatement that blends in with the surrounding surface.

Ideal for all sites where bituminous surface defects occur including:

- Highways
- City streets
- Airports
- Hiking paths
- Sidewalks
- Bike paths
- Parking lots

The proprietary infrared process addresses all general surface defects including utility trenches, chip loss, failed joints and pot holes.

The **Enviro ASP System** is available for rent and comes complete with everything required to finish your asphalt surface repair. All you need is labor and a truck to tow the **Enviro ASP System** to the repair site.

Every unit is loaded on our tandem axle trailer with the following items:

- Enviro Patcher Infrared Heater
- Walk-behind asphalt roller
- ASP Rejuvenator/Sealer
- Asphalt patching material
- Traffic cones
- Metal sprayers
- Shovels
- Asphalt rakes
- Thermometers
- Miscellaneous tools
- Tool cleaning solution

Heating surface

Make ready and apply ASP Rejuvenator

Roller and compacting

Temperature check and apply ASP Sealer
